

This image presents a **Visual Simulation** of the proposed Project from **KOP 5** on northbound SR 177, approximately 4.7 miles northeast of Desert Center and approximately 1.3 miles south of the Project's northern-most solar field. From this vantage point, the Project would appear as a noticeable, narrow, dark, horizontal band along the valley floor. The northern-most portion of the gen-tie line would be more prominently visible given its immediate foreground proximity to the viewer at KOP 5.
