SUBJECT: BARKER LOGISTICS TRAFFIC IMPACT ANALYSIS SCOPING AGREEMENT

Dear Mr. Kevin Tsang:

The firm of Urban Crossroads, Inc. is pleased to submit this scoping letter regarding the traffic impact analysis for Barker Logistics development (“Project”), which is located on the northeast corner of Patterson Avenue and Placentia Avenue in the County of Riverside. This letter describes the proposed Project trip generation, trip distribution, and analysis methodology, which have been used to establish the draft proposed Project study area and analysis locations.

PROJECT DESCRIPTION

A preliminary site use plan for the proposed Project is shown on Exhibit 1. Exhibit 2 depicts the location of the proposed project in relation to the existing roadway network. The Project is anticipated to have an Opening Year of 2021. Access to the Project site will be provided via Patterson Avenue and Placentia Avenue. It is our understanding that the Project is in the process of attempting to acquire the right-of-way to align Driveway 1 with Walnut Street to the west on Patterson Avenue. If the right-of-way cannot be acquired, the Project Applicant will need to work with County staff in order to develop an interim design for Driveway 1. The proposed Project consists of 699,630 square feet of high-cube fulfillment center use.

TRIP GENERATION

Trip generation represents the amount of traffic that is attracted and produced by a development, and is based upon the specific land uses planned for a given project. In order to develop the traffic characteristics of the proposed project, trip-generation statistics published in the DRAFT TUMF High-Cube Warehouse Trip Generation Study (WSP, November 6, 2018) which was commissioned by Western Riverside Council of Governments (WRCOG) in support of the TUMF update. However, the WSP study does not include a vehicle split, as such, the vehicle splits per the Institute of Transportation Engineers (ITE) High-Cube Warehouse Vehicle Trip Generation Analysis (October 2016) have been utilized. Trip generation rates for the Project are shown in Table 1 for both passenger car equivalent (PCE) and actual vehicles. The trip generation summary illustrating daily and peak hour trip generation estimates for the proposed Project in actual vehicles and PCE are shown in Table 2.

Finally, PCE factors were applied to the trip generation rates for heavy trucks (large 2-axles, 3-axles, 4+ axles). PCEs allow the typical “real-world” mix of vehicle types to be represented as a single, standardized unit, such as the passenger car, to be used for the purposes of capacity and level of service analyses. The PCE factors are consistent with the recommended PCE factors in Appendix B of the San Bernardino County Congestion Management Program (CMP) (2016 Update), as these factors are more conservative than Riverside County’s PCE factor of 2.0 for heavy trucks.

As shown on Table 2, the proposed Project is anticipated to generate a net total of 1,548 actual vehicle trip-ends per day with 88 AM peak hour trips and 120 PM peak hour trips. In comparison, the proposed Project is anticipated to generate a net total of 1,980 PCE trip-ends per day, 112 PCE AM peak hour trips and 142 PCE PM peak hour trips (see Table 2).

TRIP DISTRIBUTION

The Project trip distribution represents the directional orientation of traffic to and from the Project site. Trip distribution is the process of identifying the probable destinations, directions or traffic routes that will be utilized by Project traffic. The potential interaction between the planned land uses and surrounding regional access routes are considered, to identify the route where the Project traffic would distribute. Exhibit 3 illustrates the passenger car trip distribution patterns for the Project and Exhibit 4 illustrates the truck trip distribution patterns without the I-215/Placentia Avenue interchange.

The Project is anticipated to be fully constructed and operational by Year 2021 and the I-215/Placentia Avenue interchange is anticipated to be completed by 2022. As such, Project traffic would use both the Cajalco Expressway/Ramona Expressway and Nuevo Road interchanges in the interim, until the I-215 Freeway at Placentia Avenue interchange is completed. Based on the location of the Project and its proximity to the proposed I-215 Freeway and Placentia Avenue interchange, it is likely that Project traffic would utilize the new interchange once completed. The distributions for passenger cars and trucks are shown on Exhibits 5 and 6 with the I-215/Placentia Avenue interchange.

ANALYSIS SCENARIOS

Consistent with the County’s TIA guidelines, intersection analysis will be provided for the following analysis scenarios:

- Existing (2019) Conditions
- Existing plus Project (E+P) Conditions (without I-215/Placentia Interchange only)
- Existing plus Ambient Growth plus Project (EAP) Conditions (without and with I-215/Placentia Interchange)
- Existing plus Ambient Growth plus Project plus Cumulative (EAPC) Conditions (without and with I-215/Placentia Interchange)

Mr. Kevin Tsang
County of Riverside, Transportation Department
January 15, 2019
Page 3 of 3

All study area intersections will be evaluated using the Highway Capacity Manual (HCM) 6th Edition analysis methodology.

CUMULATIVE PROJECTS

It is requested that County staff provide an updated list of cumulative projects for inclusion in the traffic study. A current list of cumulative projects has already been obtained from the City of Perris. A preliminary list of cumulative projects is provided in Table 3 and are shown on Exhibit 7.

TRAFFIC COUNTS

Traffic counts (classified by vehicle type) will be conducted once the scoping agreement has been approved during a typical Tuesday, Wednesday, or Thursday when local schools are in session and operating on a typical bell schedule.

CONCLUSION

Urban Crossroads, Inc. is pleased to submit this letter documenting the Project trip generation, trip distribution, and the recommended intersection analysis locations for the Barker Logistics Traffic Impact Study. We will continue to move forward towards completing the traffic study after receiving jurisdiction approval or comments finalizing the study area.

If you have any questions, please contact me directly at (949) 336-5982.

Respectfully submitted,

URBAN CROSSROADS, INC.

Charlene So, PE
Senior Associate

Intersection Summary

Cycle Length: 60

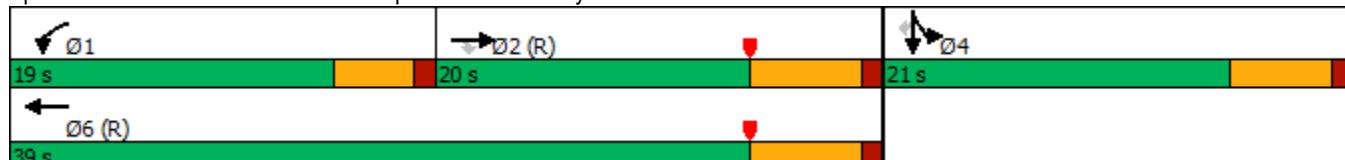

Actuated Cycle Length: 60

Offset: 16 (27%), Referenced to phase 2:NBTL and 6:, Start of Yellow

Natural Cycle: 60

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.61

Intersection Signal Delay: 14.2

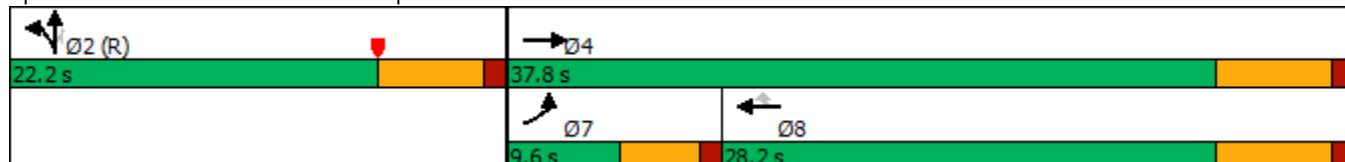

Intersection LOS: B

Intersection Capacity Utilization 59.9%

ICU Level of Service B

Analysis Period (min) 15

Splits and Phases: 16: I-215 NB Ramps & Nuevo Rd.

HCM 6th Signalized Intersection Summary

Intersection Summary

Cycle Length: 60

Actuated Cycle Length: 60

Offset: 16 (27%), Referenced to phase 2:NBTL and 6:, Start of Yellow

Natural Cycle: 55

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.63

Intersection Signal Delay: 11.0

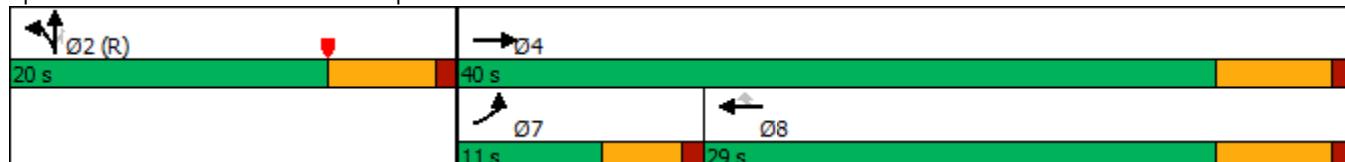

Intersection LOS: B

Intersection Capacity Utilization 63.8%

ICU Level of Service B

Analysis Period (min) 15

Splits and Phases: 16: I-215 NB Ramps & Nuevo Rd.

HCM 6th Signalized Intersection Summary

Intersection Summary

HCM 6th Ctrl Delay	44.9
HCM 6th LOS	D

Notes

User approved volume balancing among the lanes for turning movement.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.
