CHAPTER 1 - BACKGROUND

1.1 – Introduction

The purpose of this report is to summarize the hydrologic and hydraulic analyses of the proposed Barker Industrial project (PPT190008) and its associated improvements. This report is prepared in conjunction with the project's preliminary grading plans and environmental impact report (EIR). The Barker Industrial project is a proposed 30-acre light industrial property with a tilt up warehouse building and associated improvements on APN 317-240-001 in the County of Riverside. The site is bound by APNs 317-230-049 and 317-230-038 to the north; APNs 317-240-045, 317-240-017, and 317-240-019 through 317-240-021 to the east; Placentia Avenue to the south, and Patterson Avenue to the west.

This report provides a preliminary analysis of the following:

1. The proposed condition 100-year Rational Method peak flow for onsite storm drain sizing
2. The existing and proposed condition 2-year, 5-year, and 10-year storm frequency hydrographs for the 1-hour, 3-hour, 6-hour, and 24-hour durations
3. The proposed Line H-10.1 and H-11 drop inlet capacities and hydraulic grade lines (HGLs)
4. The proposed Placentia Avenue street flow and inlet capacities

1.2 – Summary of Existing Conditions

The existing undeveloped site features no structures and indirectly discharges to the Perris Valley Master Drainage Plan (MDP) Line H-11. The existing site drains from the southwest to the northeast via overland flow and shallow concentrated flow until reaching an existing easterly offsite detention pond located within APN 317-240-045 and PM 30133 Parcel 1, then directly discharging to Perris Valley MDP Line H-11 via Line K (per RCTD Drawing No. 907-H). Existing land cover consists of pervious cover with scarce vegetation. The existing site receives regional offsite run-on from approximately 185 acres from the southwest. Most of the offsite run-on is predominantly conveyed onsite via 24-inch diameter CMP culvert at the northwestern parcel corner.

1.3 – Summary of Proposed Conditions

The proposed development will feature an onsite warehouse building, paved parking, self-treating LID landscaped areas along the northern and eastern boundaries, and three underground infiltration vaults and one surface infiltration basin sized for volumetric pollutant control and 2, 5, and 10-year increased runoff criteria. The project also proposes offsite half-street improvements along the Placentia Avenue and Patterson Avenue frontages and the corresponding Perris Valley MDP storm drains, Lines H-10.1 and H-11, respectively.

CHAPTER 2 – HYDROLOGIC ANALYSIS

2.1 – Rational Method

The site proposes to extend Perris Valley MDP Line H-11 and directly tie in via a 42-inch diameter storm drain at approximately Station 19+50 per Riverside County Flood Control and Water Conservation District (RCFCWCD) Drawing No. 4-1124. This onsite storm drain system would tie into the final segment of the Line H-11 extension. It is expected that the 100-year storm would be attenuated due to the presence of the infiltration facilities; however, the private onsite storm drain system tributary thereto has been conservatively sized assuming the unattenuated peak flow rates per Rational Method hydrology.

The Line H-11 tie-in segment has upstream and downstream inverts elevated at 1515.66 and 1515.00, respectively. The adjacent finished floor elevation is 1540.88. Therefore, it is intuitive that the twenty feet between the upstream pipe soffit and the finished floor serves as sufficient freeboard at the tie-in location.

The Rational Method criteria set forth in the RCFCWCD Hydrology Manual was used to determine the unattenuated 100-year peak flow. Advanced Engineering Software (AES) was used for computing hydrologic calculations and integrates the RCFCWCD methodology and standards. Rational Method calculations are provided in Appendix 3.

2.2 – Hydrograph Routing Methodology

The existing condition is characterized by a single drainage area, whereas the proposed condition is characterized by four main drainage areas, DMAs D/1, D/2, D/3, and D/4, and two self-treating landscaped LID areas, A/1 and A/2, respectively. Existing and proposed condition hydrology maps are provided in Appendix 1. The existing and proposed drainage area summaries are presented in Table 1:

Table 1: Drainage Area Summaries

Condition	ID	A (ac)	% Imp	Runoff Index
Existing	DMA EX	31.24	0	86
Proposed	DMA D/1	12.92	94	59
	DMA D/2	11.65	100	71
	DMA D/3	1.87	87	75
	DMA D/4	2.40	61	66
	DMA A/1	0.22	0	60
	DMA A/2	0.72	0	67

The Riverside County Hydrology Manual (RCHM) was referenced to construct the unattenuated existing and proposed condition Short Cut Method hydrographs. Antecedent Moisture

Condition (AMC) I was selected for the 2-year and 5-year storms and AMC II was selected for the 10-year storm. The National Resources Conservation Service (NRCS) Web Soil Survey was used to establish the site-wide Hydrologic Soil Groups as Types A, C, and D. The National Oceanic and Atmospheric Administration (NOAA) Atlas 14 was used to determine point precipitation depths at the project site for the 1-hour, 3-hour, 6-hour, and 24-hour durations. Soil Type and Atlas 14 information is provided in Appendix 2. The point precipitation depths are summarized in Table 2:

Table 2: Point Precipitation Depths

Storm Duration	2-Year Depth (in)	5-Year Depth (in)	10-Year Depth (in)
1-hour	0.46	0.64	0.79
3-hour	0.80	1.06	1.27
6-hour	1.12	1.46	1.75
24-hour	2.00	2.66	3.20

The United States Army Corps of Engineers Hydraulic Engineering Center (HEC) Hydrologic Modeling System (HMS) was used to route the post-developed hydrographs through the proposed underground infiltration vaults and infiltration basin to analyze the provided attenuation. The attenuated outflow hydrographs were summed with the DMAs A/1 and A/2 hydrographs for each respective time step to determine the total peak flow at the site discharge point for the 1, 3, 6, and 24-hour storm durations.

The underground infiltration systems have been designed to fully retain the tributary area runoff volume generated from the 85th percentile 24-hour storm to satisfy pollutant control requirements set forth by the Riverside County Santa Ana Region WQMP. Each system will begin to route runoff volume through an internal flow control structure once the maximum allowable 72-hour ponding depth has been exceeded. The underground systems are comprised of modular precast chambers underlain by a one-foot gravel layer extending one foot beyond the modular system footprint. The internal flow control structures have been uniquely configured for each underground system through a combination of orifice and weir flow and shall be constructed within the system module adjacent to the proposed outflow storm drain. The private outflow storm drain system will tie into the proposed Line H-11 segment. Detailed outlet structure specifications are provided in Appendix 4. The general detention system specifications are provided below:

Table 3: Detention System Specifications

BMP	System Type	Gravel Depth (in)	D_{72max} (ft)	A_{gravel} (sf)	A_{module} (sf)	A_{basin}(sf)
D/1	Oldcastle StormCapture SC-6	12	3.65	9,700	7,560	N/A
D/2	Oldcastle StormCapture SC-6	12	2.45	14,500	11,340	N/A
D/3	Oldcastle StormCapture SC-4	12	2.93	1,908	1,365	N/A
D/4	Infiltration Basin	N/A	2.45	N/A	N/A	4,736

Complete hydrograph and detention routing data are provided in Appendices 4 and 5. The hydrograph routing analyses are summarized in the tables below:

Table 4: 2-Year Peak Flow Summary

Storm Event	2-Year Peak Flow Summary (cfs)			
	Existing	Unmitigated	Mitigated	Difference
2-yr, 24-hour	1.71	5.43	1.23	-0.48
2-yr, 6-hour	11.09	17.31	2.61	-8.48
2-yr, 3-hour	14.03	20.08	1.00	-13.03
2-yr, 1-hour	39.34	44.22	0.93	-38.41

Table 5: 5-Year Peak Flow Summary

Storm Event	5-Year Peak Flow Summary (cfs)			
	Existing	Unmitigated	Mitigated	Difference
5-yr, 24-hour	2.18	8.05	2.03	-0.15
5-yr, 6-hour	17.71	23.60	5.92	-11.79
5-yr, 3-hour	22.15	27.83	3.58	-18.57
5-yr, 1-hour	59.14	63.09	1.53	-57.61

Table 6: 10-Year Peak Flow Summary

Storm Event	Peak Flow Summary (cfs)			
	Existing	Unmitigated	Mitigated	Difference
10-yr, 24-hour	8.83	11.03	7.35	-1.48
10-yr, 6-hour	28.40	30.11	15.38	-13.02
10-yr, 3-hour	33.70	35.16	4.41	-29.29
10-yr, 1-hour	81.12	80.37	3.31	-77.81

CHAPTER 3 – OFFSITE HYDRAULIC ANALYSIS

3.1 – Line H-10.1 & H-11 Inlets

The proposed Line H-10.1 portion will extend from the Placentia Avenue and Patterson Avenue intersection to Line H-11 at the Placentia Avenue and Harvill Avenue intersection. The system will be comprised of 30-inch, 36-inch, and 66-inch diameter RCP. The proposed Line H-10.1 headworks will be comprised of a 48-inch diameter CMP riser drop inlet located within the Placentia Avenue southern shoulder, just east of Patterson Avenue. The drop inlet will be located within the public right-of-way and will be sized to convey the MDP design flowrate of 72 cubic feet per second (cfs) from the 45-acre offsite tributary area without overtopping the roadway. The Placentia Avenue improvements will include curb inlets located just upstream of the proposed westerly driveway, sized to intercept local half-street runoff. It should be noted that, due to the concurrent planning and engineering of the separate, easterly adjacent Placentia Logistics Center project (PPT200002), it is anticipated that PPT190008 will only be responsible for the upstream segment of Line H-10.1 contained within the proposed extents of the Placentia Avenue frontage improvements. The Placentia Logistics Center project will be constructed first and will therefore be responsible for the downstream segment extending from the eastern terminus of the Placentia Avenue improvements (discussed herein) to the existing segment of Line H-11 at Harvill Avenue.

The proposed Line H-11 portion will extend from the Patterson Avenue and Walnut Avenue intersection to the current Line H-11, Stage No. 2 Station 19+46 (per RCFCWCD Drawing No. 4-1128). The system will be comprised of a 48-inch diameter RCP. The proposed Line H-11 headworks will be comprised of a dual 60-inch diameter CMP riser drop inlet system located at the current culvert inlet location within the southwestern Patterson Avenue and Walnut Street shoulder. The drop inlet will be sized to convey the 230 cfs MDP design flowrate from the approximate 140-acre offsite tributary area without overtopping the roadway and will replace the existing 24-inch diameter CMP culvert and located within the public right-of-way. The Patterson Avenue improvements will also include a curb inlet located just south of the proposed driveway sized to intercept local half-street runoff. The proposed alignments are provided in Appendix 7.

To determine the proposed inlet capacities, each drop inlet system was analyzed under the following flow control scenarios:

1. The riser operating under weir flow (riser weir flow control)
2. The riser opening operating under horizontal orifice flow (riser orifice flow control)

The results are summarized in Table 9:

Table 9: Riser Maximum Capacities

Scenario	Flowrate (cfs)	
	Line H-10.1	Line H-11
MDP Flowrate	72	230
Riser Weir Flow Control	106	266
Riser Orifice Flow Control	88	276

The drop inlet capacity analysis shows that each drop inlet system is capable of fully intercepting the MDP design flowrate tributary to its headworks into their respective underground storm drain systems without overtopping the adjacent roadway. Supporting calculations are provided in Appendix 8.

3.2 – Line H-10.1 & H-11 HGL

The hydraulic grade lines (HGLs) for the proposed line extensions were considered. The HGLs were computed for each profile using XPWSPG software. Both lines were analyzed using the MDP flowrates, assuming additional flows enter the system as shown on the Perris Valley MDP Exhibit (provided in Appendix 11). Line H-10.1 was assumed to slope at the same rate as the existing street sections, as final street improvement plans will be prepared at the project engineering stage.

The HGL analyses demonstrate that the proposed pipe sizes can convey the design flowrates while maintaining at least one foot of freeboard between the HGL and curb flowline. Supporting calculations are provided in Appendix 9.

3.3 – Placentia Avenue Capacity

Street flow and inlet capacities were analyzed for Placentia Avenue. The proposed drop inlet is expected to fully intercept the 72 cfs tributary to the line headworks; therefore, the incremental increase in flowrates per the Perris Valley MDP were considered when assessing the proposed street section capacities and inlet locations. Street and inlet capacities were calculated using Hydraflow Express Extension for Autodesk AutoCAD Civil 3D software.

Based on the incremental increase between the H-10.1 system headworks (72 cfs) and Tobacco Road (114 cfs), 42 cfs was analyzed upstream of the westerly driveway. Based on existing topography, it is evident that the increase in runoff would enter Placentia Avenue from the south; therefore, the southern improved half-street capacity was considered and found to be approximately 12 cfs. The remaining 30 cfs was assumed to be conveyed within the proposed improved northern half-street until reaching the proposed 21-foot curb inlet just west of the westerly driveway. The proposed curb inlet would intercept approximately 18 cfs, bypassing the remaining 12 cfs downstream across the driveway entrance. The driveway gutter capacity was considered and found to be approximately 13 cfs; therefore, the proposed curb inlet is sized to intercept a sufficient quantity of flow without inundating the downstream driveway cross-gutter capacity.

An additional 21-ft curb inlet is proposed at the eastern terminus of the Placentia improvements. This curb inlet will receive the 12 cfs bypass and capture 10 cfs; the remaining 2 cfs will bypass downstream.

The incremental increase (18 cfs) between Tobacco Road (114 cfs) and midway between Tobacco Road and Harvill Avenue (132 cfs) was analyzed for the next proposed curb inlet per the PERRIS VALLEY MDP. As before, the 12 cfs capacity of the southern half-street was considered. Therefore, 6 cfs is anticipated to reach the northern half-street and was added to the 2 cfs bypass from the upstream inlet for a total of 8 cfs at the next 21-ft curb inlet located just west of the easterly driveway for Placentia Logistics Center project (PPT200002)—approximately midway between the eastern terminus of the PPT190008 Placentia Street improvement and Harvill Avenue. This proposed curb inlet will just nearly intercept the full 8 cfs, bypassing a negligible flowrate to the Placentia/Harvill intersection, where a final 7-foot sump curb inlet is proposed to intercept the remaining bypass and local half-street flow. Supporting calculations are provided in Appendix 10.

CHAPTER 4 – CONCLUSION

Our preliminary analysis demonstrates that the Barker Industrial project will:

1. Provide adequately sized onsite facilities for the 100-year storm
2. Provide adequate attenuation for the 2-year, 5-year, and 10-year storms
3. Provides full interception at the proposed Line H-10.1 and H-11 headworks
4. Provides adequate facilities to convey Placentia Avenue street flow

[1] Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

Please refer to NOAA Atlas 14 document for more information.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:15,800.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Western Riverside Area, California
Survey Area Data: Version 12, Sep 16, 2019

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: May 25, 2019—Jun 25, 2019

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Hydrologic Soil Group

Map unit symbol	Map unit name	Rating	Acres in AOI	Percent of AOI
FbC2	Fallbrook sandy loam, shallow, 5 to 8 percent slopes, eroded	D	17.5	55.3%
GyC2	Greenfield sandy loam, 2 to 8 percent slopes, eroded	A	2.7	8.6%
HcC	Hanford coarse sandy loam, 2 to 8 percent slopes	A	0.5	1.6%
MmC2	Monserate sandy loam, 5 to 8 percent slopes, eroded	C	10.9	34.3%
RaB2	Ramona sandy loam, 2 to 5 percent slopes, eroded	C	0.1	0.3%
Totals for Area of Interest			**31.7**	**100.0%**

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

Rating Options

Aggregation Method: Dominant Condition

Component Percent Cutoff: None Specified

Tie-break Rule: Higher

LEGAL DESCRIPTION

(PER NORTH AMERICAN TITLE COMPANY TITLE REPORT NO. 91402-1541640-17 DATED NOVEMBER 28, 2017.)

THE REAL PROPERTY IN THE UNINCORPORATED AREA OF THE COUNTY OF RIVERSIDE, STATE OF CALIFORNIA, DESCRIBED AS FOLLOWS:

LOTS 11 AND 14 OF CHANDLER'S SUBDIVISION, AS SHOWN BY MAP ENTITLED "REVISED MAP OF CHANDLER'S SUBDIVISION OF THE NORTHEAST 1/4 OF SECTION 13, IN TOWNSHIP 4 SOUTH, RANGE 4 WEST, SAN BERNARDINO BASE AND MERIDIAN", ON FILE IN BOOK 1 PAGE 33 OF MAPS, RECORDS OF RIVERSIDE COUNTY, CALIFORNIA.

THE LAND SHOWN IN THIS SURVEY IS THE SAME AS THAT DESCRIBED PER NORTH AMERICAN TITLE COMPANY TITLE REPORT NO. 91402-1541640-17 DATED NOVEMBER 28, 2017.

FEMA NOTE

ZONE "X" DENOTES AREAS OUTSIDE THE 1-PERCENT ANNUAL CHANCE FLOOD PLAIN, AREAS OF 1% ANNUAL CHANCE SHEET FLOW FLOODING WHERE AVERAGE DEPTHS ARE LESS THAN 1 FOOT, AREAS OF 1% ANNUAL CHANCE STREAM FLOODING WHERE THE CONTRIBUTING DRAINAGE AREA IS LESS THAN 1 SQUARE MILE, OR AREAS PROTECTED FROM THE 1% ANNUAL CHANCE FLOOD BY LEVEES.

PERRIS MDP LINE H-10.1
RESULTS SUMMARY

WARNING SUMMARY
************************************
 WARNING 47: Junction Node3 has a different channel than its direct downstream element.
 WARNING 47: Junction Node6 has a different channel than its direct downstream element.
 WARNING 61: Angle point for closed channel Link1 outside proposed range of between 0 and 15 degrees.
 WARNING 61: Angle point for closed channel Link6 outside proposed range of between 0 and 15 degrees.
 WARNING 36: D/S processing stopped in junction Node6 because critical momentum is greater than maximum momentum.

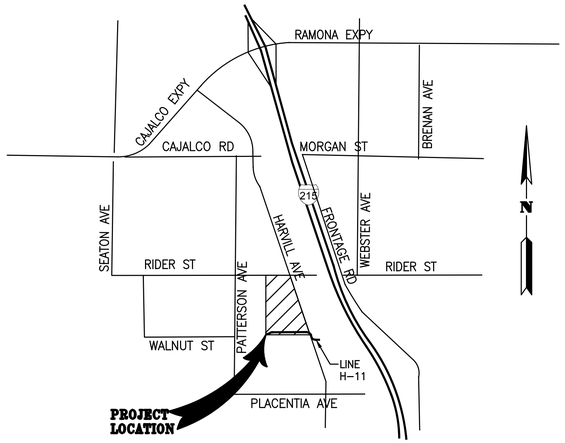
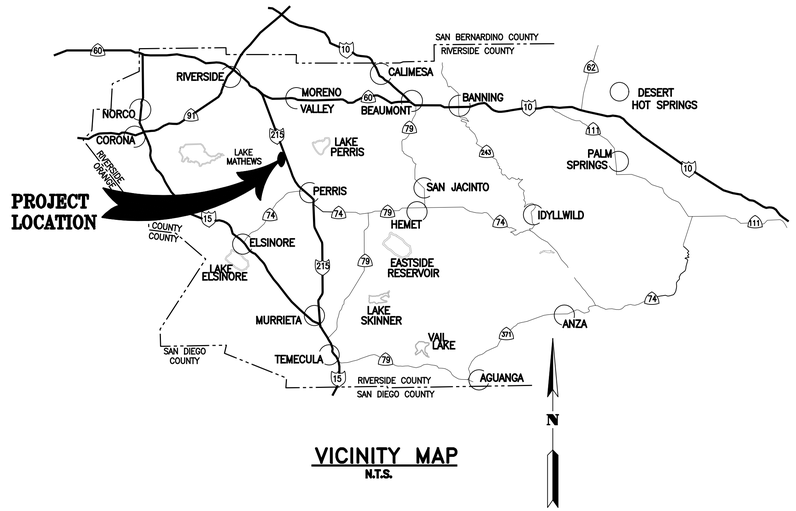
RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT



VICINITY MAP

T4S R4W SEC 13
N.T.S.



VICINITY MAP

N.T.S.

GENERAL NOTES

1. THE CONTRACTOR SHALL CONSTRUCT THE FLOOD CONTROL IMPROVEMENTS SHOWN ON THE DRAWINGS IN CONFORMANCE WITH THE REQUIREMENTS OF THE RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT'S M.O.U. STANDARD SPECIFICATIONS DATED JUNE 24, 2008, AND RCFC & WCD STANDARD MANUAL. FOR THE LATEST DRAWINGS OF THE STANDARD MANUAL, PLEASE REFER TO THE "PUBLICATIONS AND RECORDS" PAGE FOUND ON THE DISTRICT'S WEBSITE.
2. (IF) AN ENCROACHMENT PERMIT IS REQUIRED FROM RIVERSIDE COUNTY FLOOD CONTROL. CONTACT ENCROACHMENT PERMITS AT 951/955-1266. AFTER THE PERMIT IS ISSUED THE DISTRICT MUST BE NOTIFIED ONE WEEK PRIOR TO CONSTRUCTION.
3. CONSTRUCTION INSPECTION WILL BE PERFORMED BY RIVERSIDE COUNTY FLOOD CONTROL. CONTACT CONSTRUCTION ADMINISTRATION AT 951/955-1288. THE DISTRICT MUST BE NOTIFIED TWENTY DAYS (20) PRIOR TO CONSTRUCTION.
4. ALL STATIONING REFERS TO CENTERLINE OF CONSTRUCTION UNLESS OTHERWISE NOTED.
5. STATIONING FOR LATERALS AND CONNECTOR PIPE REFER TO THE CENTERLINE INTERSECTION STATIONS.
6. FORTY-EIGHT HOURS BEFORE EXCAVATION, CALL UNDERGROUND SERVICE ALERT 1-800-227-2600.
7. ALL ELEVATIONS SHOWN ARE IN FEET AND DECIMALS THEREOF BASED ON THE NORTH AMERICAN VERTICAL DATUM (NAVD 88).
8. ALL COORDINATES ARE SHOWN IN FEET AND DECIMALS THEREOF BASED ON THE NORTH AMERICAN DATUM (NAD 83), CALIFORNIA COORDINATE SYSTEM (CCS), ZONE 6 AND EPOCH 2010.00.
9. ALL CROSS SECTIONS ARE TAKEN LOOKING DOWNSTREAM.
10. ELEVATIONS OF UTILITIES ARE APPROXIMATE UNLESS OTHERWISE NOTED.
11. UNLESS OTHERWISE SPECIFIED, MINIMUM STREET RECONSTRUCTION SHALL BE 4" TYPE "B" HOT MIX ASPHALT OVER 6" CLASS 2 AGGREGATE BASE OR AS SPECIFIED BY THE ENGINEER.
12. OPENINGS RESULTING FROM THE CUTTING OR PARTIAL REMOVAL OF EXISTING CULVERTS, PIPES OR SIMILAR STRUCTURES TO BE ABANDONED SHALL BE SEALED WITH 6" OF CLASS "B" CONCRETE.
13. PIPE CONNECTED TO THE MAINLINE PIPE SHALL CONFORM TO JUNCTION STRUCTURE NO. 4 (JS 229) UNLESS OTHERWISE NOTED.
14. PIPE BEDDING SHALL CONFORM TO RCFC & WCD STD. DWG. NO. M815 EXCEPT FOR COVER <2 FEET. FOR COVER <2 FEET, CONCRETE SLURRY (2000 PSI) SHALL BE USED. THE ENTIRE TRENCH SHALL BE SLURRY EXTENDING 4 INCHES MINIMUM AND 12 INCHES MAXIMUM ABOVE THE TOP OF THE PIPE.
15. T-1 INDICATES SOIL BORING LOCATIONS BASED ON THE SOILS REPORT DATED NOVEMBER 3, 2015. LOCATIONS SHOWN ARE APPROXIMATE.
16. "V" IS THE DEPTH OF CATCH BASINS MEASURED FROM THE TOP OF CURB TO INVERT OF CONNECTOR PIPE.
17. CATCH BASINS SHALL BE LOCATED SO THAT LOCAL DEPRESSION SHALL BEGIN AT EXISTING CURB RETURN JOINT, UNLESS OTHERWISE SPECIFIED.
18. ALL CURBS, GUTTERS, SIDEWALKS, DRIVEWAYS AND OTHER EXISTING IMPROVEMENTS TO BE RECONSTRUCTED IN KIND AND AT THE SAME ELEVATION AND LOCATION AS THE EXISTING IMPROVEMENTS UNLESS OTHERWISE NOTED.
19. STANDARD DRAWINGS CALLED FOR ON THE PLAN AND PROFILE SHALL CONFORM TO DISTRICT STANDARD DRAWINGS UNLESS NOTED OTHERWISE.
20. THE CONTRACTOR IS REQUIRED TO CALL ALL UTILITY AGENCIES REGARDING TEMPORARY SHORING AND SUPPORT REQUIREMENTS FOR THE VARIOUS UTILITY LINES SHOWN ON THESE PLANS.
21. DURING ROUGH GRADING OPERATIONS AND PRIOR TO CONSTRUCTION OF PERMANENT DRAINAGE STRUCTURES, TEMPORARY DRAINAGE CONTROL SHOULD BE PROVIDED TO PREVENT PONDING WATER AND DAMAGE TO ADJACENT PROPERTIES.
22. APPROVAL OF THESE PLANS BY THE RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT DOES NOT RELIEVE THE DEVELOPER'S ENGINEER OF RESPONSIBILITY FOR THE ENGINEERING DESIGN. IF FIELD CHANGES ARE REQUIRED, IT WILL BE THE RESPONSIBILITY OF THE DESIGN ENGINEER TO MAKE THE NECESSARY CORRECTIONS.
23. THE CONTRACTOR OR DEVELOPER SHALL SECURE ALL REQUIRED ENCROACHMENT AND/OR STATE AND FEDERAL REGULATORY PERMITS PRIOR TO THE COMMENCEMENT OF ANY WORK.
24. THE CONCRETE COATING ON THE INSIDE OF ALL REINFORCED CONCRETE PIPES MUST BE INCREASED TO PROVIDE A MINIMUM OF 1-1/2 INCHES OVER THE REINFORCING AND INCREASED TO A MINIMUM OF 3-1/2 INCHES OVER REINFORCING FOR BOX CULVERT, WHEN DESIGN VELOCITIES EXCEED 20 FEET PER SECOND. THE CONCRETE DESIGN STRENGTH IN THESE REACHES SHALL BE F'C=5,000 PSI FOR VELOCITIES EXCEEDING 20 FEET PER SECOND AND F'C=6,000 PSI FOR VELOCITIES EXCEEDING 30 FEET PER SECOND.
25. CONSTRUCTION JOINT FOR CALTRANS STANDARD REINFORCED CONCRETE BOX SHALL BE PLACED ACCORDING TO RCFC & WCD STANDARD DRAWING NO. BX 401.

BASIS OF BEARING

THE BASIS OF BEARINGS FOR THIS SURVEY IS THE CALIFORNIA STATE PLANE COORDINATE SYSTEM,
CCS83, ZONE 6, BASED LOCALLY ON CONTROL STATIONS "MLFP", AND "PPBF" NAD 83(NSRS2011) AS SHOWN HEREON. ALL BEARINGS SHOWN ON THIS MAP ARE GRID. QUOTED BEARINGS AND DISTANCES FROM REFERENCE MAPS OR DEEDS ARE AS SHOWN PER THAT RECORD REFERENCE. ALL DISTANCES SHOWN ARE GROUND DISTANCES UNLESS SPECIFIED OTHERWISE. GRID DISTANCES, MAY BE OBTAINED BY MULTIPLYING THE GROUND DISTANCE BY A COMBINATION FACTOR OF 0.999921668. CALCULATIONS ARE MADE AT POINT WITH COORDINATES OF:
N: 2242591.767, E: 6259065.349,
USING AN ELEVATION OF 1532.127 FEET (NAVD88).

NOTICE TO CONTRACTOR

IT IS THE CONTRACTOR'S RESPONSIBILITY TO VERIFY THE LOCATION AND ELEVATION OF THE EXISTING FACILITIES PRIOR TO THE START OF ANY CONSTRUCTION

RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT

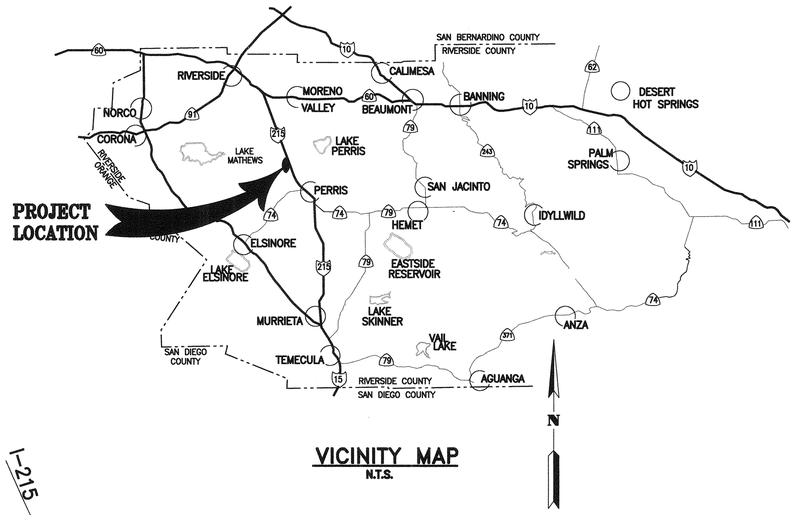
INDEX MAP
1" = 100'



VICINITY MAP
N.T.S.

GENERAL NOTES

1. THE CONTRACTOR SHALL CONSTRUCT THE FLOOD CONTROL IMPROVEMENTS SHOWN ON THE DRAWINGS IN CONFORMANCE WITH THE REQUIREMENTS OF THE RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT'S M.O.U. STANDARD SPECIFICATIONS DATED JUNE 24, 2008, AND RCFC&WCD STANDARD MANUAL. FOR THE LATEST DRAWINGS OF THE STANDARD MANUAL, PLEASE REFER TO THE "PUBLICATIONS AND RECORDS" PAGE FOUND ON THE DISTRICT'S WEBSITE.
2. CONTACT THE ENCROACHMENT PERMIT ENGINEER AT 951.955.1266 IF AN ENCROACHMENT PERMIT IS REQUIRED FROM RIVERSIDE COUNTY FLOOD CONTROL. AFTER THE PERMIT IS ISSUED THE DISTRICT MUST BE NOTIFIED ONE WEEK PRIOR TO CONSTRUCTION.
3. CONTACT CONSTRUCTION MANAGEMENT AT 951.955.1288 IF CONSTRUCTION INSPECTION WILL BE PERFORMED BY RIVERSIDE COUNTY FLOOD CONTROL. THE DISTRICT MUST BE NOTIFIED TWENTY DAYS (20) PRIOR TO CONSTRUCTION.
4. ALL STATIONING REFERS TO CENTERLINE OF CONSTRUCTION UNLESS OTHERWISE NOTED.
5. STATIONING FOR LATERALS AND CONNECTOR PIPE REFER TO THE CENTERLINE INTERSECTION STATIONS.
6. FORTY-EIGHT HOURS BEFORE EXCAVATION, CALL UNDERGROUND SERVICE ALERT 1.800.227.2600.
7. ALL ELEVATIONS SHOWN ARE IN FEET AND DECIMALS THEREOF BASED ON THE NORTH AMERICAN VERTICAL DATUM (NAVD 88).
8. ALL COORDINATES ARE SHOWN IN FEET AND DECIMALS THEREOF BASED ON THE NORTH AMERICAN DATUM (NAD 83), CALIFORNIA COORDINATE SYSTEM (CCS), ZONE 6 AND EPOCH 2010.00.
9. ALL CROSS SECTIONS ARE TAKEN LOOKING DOWNSTREAM.
10. ELEVATIONS OF UTILITIES ARE APPROXIMATE UNLESS OTHERWISE NOTED.
11. UNLESS OTHERWISE SPECIFIED, MINIMUM STREET RECONSTRUCTION SHALL BE 4" TYPE "B" HOT MIX ASPHAULT OVER 6" CLASS 2 AGGREGATE BASE OR AS SPECIFIED BY THE ENGINEER
12. OPENINGS RESULTING FROM THE CUTTING OR PARTIAL REMOVAL OF EXISTING CULVERTS, PIPES OR SIMILAR STRUCTURES TO BE ABANDONED SHALL BE SEALED WITH 6" OF CLASS "B" CONCRETE.
13. PIPE CONNECTED TO THE MAINLINE PIPE SHALL CONFORM TO JUNCTION STRUCTURE NO. 4 (JS 229) UNLESS OTHERWISE NOTED.
14. PIPE BEDDING SHALL CONFORM TO RCFC&WCD STD. DWG. NO. M815 EXCEPT FOR COVER <2 FEET. FOR COVER <2 FEET, CONCRETE SLURRY (2000 PSI) SHALL BE USED. THE ENTIRE TRENCH SHALL BE SLURRY EXTENDING 4 INCHES MINIMUM AND 12 INCHES MAXIMUM ABOVE THE TOP OF THE PIPE.
15. ⊕ INDICATES SOIL BORING LOCATIONS BASED ON THE SOILS REPORT BY TERRACON DATED 4/19/2017. LOCATIONS SHOWN ARE APPROXIMATE.
16. "H" IS THE DEPTH OF CATCH BASINS MEASURED FROM THE TOP OF CURB TO INVERT OF CONNECTOR PIPE.
17. CATCH BASINS SHALL BE LOCATED SO THAT LOCAL DEPRESSION SHALL BEGIN AT EXISTING CURB RETURN JOINT, UNLESS OTHERWISE SPECIFIED.
18. ALL CURBS, GUTTERS, SIDEWALKS, DRIVEWAYS AND OTHER EXISTING IMPROVEMENTS TO BE RECONSTRUCTED IN KIND AND AT THE SAME ELEVATION AND LOCATION AS THE EXISTING IMPROVEMENTS UNLESS OTHERWISE NOTED.
19. STANDARD DRAWINGS CALLED FOR ON THE PLAN AND PROFILE SHALL CONFORM TO DISTRICT STANDARD DRAWINGS UNLESS NOTED OTHERWISE.
20. THE CONTRACTOR IS REQUIRED TO CALL ALL UTILITY AGENCIES REGARDING TEMPORARY SHORING AND SUPPORT REQUIREMENTS FOR THE VARIOUS UTILITY LINES SHOWN ON THESE PLANS.
21. DURING ROUGH GRADING OPERATIONS AND PRIOR TO CONSTRUCTION OF PERMANENT DRAINAGE STRUCTURES, TEMPORARY DRAINAGE CONTROL SHOULD BE PROVIDED TO PREVENT PONDING WATER AND DAMAGE TO ADJACENT PROPERTIES.
22. APPROVAL OF THESE PLANS BY THE RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT DOES NOT RELIEVE THE DEVELOPER'S ENGINEER OF RESPONSIBILITY FOR THE ENGINEERING DESIGN. IF FIELD CHANGES ARE REQUIRED, IT WILL BE THE RESPONSIBILITY OF THE DESIGN ENGINEER TO MAKE THE NECESSARY CORRECTIONS.
23. THE CONTRACTOR OR DEVELOPER SHALL SECURE ALL REQUIRED ENCROACHMENT AND/OR STATE AND FEDERAL REGULATORY PERMITS PRIOR TO THE COMMENCEMENT OF ANY WORK.
24. THE CONCRETE COATING ON THE INSIDE OF ALL REINFORCED CONCRETE PIPES MUST BE INCREASED TO PROVIDE A MINIMUM OF 1-1/2 INCHES OVER THE REINFORCING AND INCREASED TO A MINIMUM OF 3-1/2 INCHES OVER REINFORCING FOR BOX CULVERT, WHEN DESIGN VELOCITIES EXCEED 20 FEET PER SECOND. THE CONCRETE DESIGN STRENGTH IN THESE REACHES SHALL BE F'C=5,000 PSI FOR VELOCITIES EXCEEDING 20 FEET PER SECOND AND F'C=6,000 PSI FOR VELOCITIES EXCEEDING 30 FEET PER SECOND.
25. CONSTRUCTION JOINTS FOR CALTRANS STANDARD REINFORCED CONCRETE BOX SHALL BE PLACED ACCORDING TO RCFC&WCD STANDARD DRAWING NO. BOX 401.

Note:
Q100ult is the 100 year frequency design flow, based on the ultimate offsite developement.

Q100ex is the 100 year frequency design flow, based on the existing offsite conditions as of March 1991.

Q100pr is the 100 year frequency design flow, that is routed through the proposed street sections. this flow was generated based on the Q100ex. offsite.

Qdesign is the design flow used to size the proposed storm drains see hydrology/hydraulic report for more detailed information.

GENERAL NOTES

1. The contractor shall be responsible for the clearing of the proposed work area, and relocation costs for all existing utilities. Permittee must inform county of construction schedule at least 48 hours prior to begining of construction. Phone No. 275-6883.
2. All work shall conform to the requirements of the Riverside County Transportation Department. Improvement Standards and Specifications, dated 1990 County Ordinance No. 461 & subsequent amendments.
3. It shall be the responsibility of the contractor to notify the engineer, to install street centerline monuments as required by Riverside County Ordinance No. 461.
4. All underground facilities, including laterals, shall be in place prior to paving the street including, but not limited to, the following: ~~SEWER~~, WATER, ~~ELECTRIC, GAS~~, and DRAINAGE.
5. Curb depressions and driveway approaches will be installed and constructed according to County Standard No. 206 and/or No. 207 as directed in the field.
6. All street sections are tentative. Additional soil tests shall be taken after rough grading to determine the exact street section requirements. Use std. 401 if expansive material are encountered.
7. "Asphaltic Emulsion" (Fog Seal) shall be applied not less than fourteen days following placement of the asphalt surfacing and shall be applied at a rate of 0.10 gallon per square yard. Asphaltic Emulsion shall conform to sections 37, 39 and 94 of the State Standard Specifications.
8. Prime coat is required prior to paving all grades in excess of ten percent.

GENERAL NOTES CONT.

9. No equipment or material may be stored on the A.T. & S.F. Railroad or Caltrans Right-of-Way.
10. An encroachment permit is required before any work may begin in or near the State Right-of-Way. (From Caltrans).
11. All work within the State Right-of-Way shall conform to the latest State Standard Plans & Specifications or as directed by the State's Representative (standards other than State must be pre-approved and justified).
12. All disturbed areas in the State Right-of-Way must be treated for erosion control (Hydroseeding or equivalent), or as directed by the State's Representative). The responsibility for maintaining erosion control will not be released until the seeding is well established. The contractor will be responsible for the cost of Caltrans cleaning any drainage structures/channels which have become cluttered with debris and/or silt as a result of, or caused by, the construction project.
13. Access control on the freeway will be maintained at all times. I.E., the work inside the State Right-of-Way must be fenced off with no access to the work area from the freeway.
14. No freeway ramps or freeway lanes may be closed or obstructed at anytime unless specifically allowed per the encroachment permit and/or as directed by the State's Representative.
15. Where survey monuments exist, such monuments shall be protected or shall be referenced and reset pursuant to business and professions code, sections 8700 to 8805 (Land surveyor's act).
16. All signs, roadside markers, electroliers, etc., shall be protected and/or replaced in-kind according to the current State Standard Plans and the current Traffic Manual, at no cost to the State.
17. It shall be the responsibility of the contractor to install and maintain all construction, regulatory, guide and warning signs within the project limits and its surroundings and to provide safe passage for the travelling public and workers until the final completion and acceptance of the project by the county.

GENERAL NOTES CONT.

18. It is the responsibility of the contractor to apply to Riverside County Flood Control and Water Conservation District for an encroachment permit for construction of laterals "P" and "R" contact Ken Vecchiarelli at (714) 275-1279.
19. All "Grade to drain" daylight ditches shall be constructed as trapezoidal earth channels having a minimum basewidth of 5 feet and 4:1 sideslope.
20. The contractor shall be responsible for ensuring that any State drainage facility which is connected to or directly affected by the contractors operation shall be clean and operational prior to final acceptance of the permit work by the State. Adequate clean-outs and access opening shall be provided in any construction within the State's right of way for future maintenance and repair work as needed. This work shall be furnished at no cost to the State.
