Re: Cultural Resources Study for the Calvary Chapel Bible Fellowship Project, Temecula, Riverside County, California: Record Search Update

Dear Mr. Naggar:

This letter report documents the updated record search results from a prior archaeological survey conducted by ASM Affiliates, Inc. (ASM) for the Calvary Chapel Bible Fellowship Project located within the City of Temecula, Riverside County, California (Figure 1). The original report pertaining to this proposed development project (Willis and Hale 2011) stated that no significant resources were identified from either the prior records search or the field survey. Since three years have lapsed since the 2011 report was submitted, an additional record search was undertaken to provide an updated context.

The project area is shown on the Bachelor Mountain, California, 7.5-minute USGS topographic quadrangle in Township 7 South, Range 2 West. The project area is located in the city of Temecula California north of Rancho California Road between Calle Contento and Newton Road, plot plan number PP24883 (Figure 2). The project involved a search of the Native American Heritage Commission (NAHC) files, a records search, and an intensive pedestrian survey of the project area. This study was completed in compliance with the California Environmental Quality Act (CEQA).

An Updated Review of Previous Cultural Resources Investigations

For the current update an additional records search (dated June 6, 2014) was requested by ASM and executed by the Eastern Information Center (EIC) for the project and a one-mile radius surrounding it. The search involved a review of recorded cultural resources, previous survey report boundaries, historic addresses, and a historic maps database. The results of the original record search conducted (dated June 3, 2011) was also provided to the EIC to help expedite the update process.

The 2011 record search found that no previously recorded resources occur within the project area and the most recent record search provided the same results. Since the 2011 record search, only one cultural resource was identified within the 1-mile radius of the current project area and only one new study has been conducted within the general project vicinity though well outside of the currently project boundary (Confidential Appendix).
Recommendations

No significant prehistoric or historic resources were identified during the pedestrian survey of the Calvary Chapel Bible Fellowship Project area (Willis and Hale 2011). A previous record search dated June of 2011 found that no cultural resources had been previously recorded within the current project area. An updated record search performed in June of 2014 three years later also found the same results. The only changes noted was that one additional cultural resource and one additional study had been conducted within a 1-mile vicinity well outside of the current project boundaries. Since no cultural resources have been identified in the original 2011 survey and record search as well as during the current record search update, no further cultural resources work is recommended in the project area.

If you have any questions regarding this report, please do not hesitate to contact me via telephone (760-804-5757) or email (mbecker@asmaaffiliates.com).

Sincerely,

Mark S. Becker, Ph.D., RPA
