This Phase I Environmental Site Assessment Report for the undeveloped Building 14B Site located at the Majestic Freeway Business Center in Perris, California, dated July 19, 2022, was prepared by Allison O'Neal and reviewed by Justin Rauzon.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312. The resumes for the individuals below are included in **Appendix F**. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Senior Project Manager
SCS ENGINEERS

EXECUTIVE SUMMARY

SCS Engineers (SCS) was retained by Majestic Realty Co. to prepare a Phase I Environmental Site Assessment (Phase I ESA) of the undeveloped Building 14B Site located at the Majestic Freeway Business Center in Perris, California (the "Property"). This assessment was performed in conformance with 40 CFR 312, Standards for Conducting All Appropriate Inquiries, and in general conformance with ASTM E1527-13.

The Property, which is not currently associated with an assigned address, is located west of Harvill Avenue between Commerce Center Drive and Perry Street. The Property encompasses an area of approximately 10.11 acres, mostly covered with dry vegetation. It was previously graded and has been terraced. No areas of environmental concern were identified at the Property during the site inspection.

The Property has been undeveloped or agricultural land since the early-1900s. It was graded and terraced between 1994 and 2002. One small pile of concrete rubble was observed on the northwestern portion of the Property. Approximately 11 one-gallon motor oil containers, likely containing waste oil, were also observed on the northwestern portion of the Property. There was no evidence the oil containers had leaked.

Regulatory database information identified few known and suspected contamination sites in the area surrounding the Property. Based on a review of the available information, it is unlikely that any of these sites has negatively affected the environmental condition of the Property.

Conclusions

In summary, SCS performed a Phase I ESA of the Majestic Freeway Business Center - Building 14B Site located in Perris, California, in conformance with the scope and limitations of 40 CFR 312 and ASTM E1527-13. Any exceptions to, or deletions from, this practice are described in Section 5 of this report.

In the opinion of the Environmental Professionals, this assessment has revealed no evidence of conditions indicative of releases or threatened releases of hazardous substances. Further investigation is not recommended.

1 INTRODUCTION

SCS Engineers (SCS) was retained by Majestic Realty Co. (the “User”) to prepare a Phase I Environmental Site Assessment (Phase I ESA) of the undeveloped Building 14B Site located at the Majestic Freeway Business Center in Perris, California (the “Property”). A location map for the Property is presented as **Figure 1** in **Appendix A**. This assessment was performed in conformance with 40 CFR 312, Standards for Conducting All Appropriate Inquiries (AAI), and in general conformance with ASTM E1527-13.

2 PURPOSE

This Phase I ESA is intended to constitute appropriate inquiry into the previous ownership and uses of the Property, as required to support the assertion of the innocent landowner, contiguous property owner, and/or bona fide prospective purchaser defenses to liability (collectively the landowner liability protections, or LLPs) under the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA a.k.a. Superfund), as amended by the Superfund Amendments and Reauthorization Act of 1986 (SARA), and the Small Business Liability Relief and Brownfields Revitalization Act of 2002.

The purpose of this investigation was to identify conditions indicative of releases or threatened releases of hazardous substances as defined in CERCLA Section 101, and petroleum products, on, at, in, or to the Property.

If known or suspected contamination is identified, Users seeking to maintain LLPs have responsibilities in addition to completion of an AAI-compliant Phase I ESA. These “continuing obligations” include taking “appropriate care” and “reasonable steps” with respect to known or suspected releases of hazardous substances during the term of property ownership. In addition to these requirements under federal law, there are different requirements under state law with respect to liability protections. On request, SCS can provide support for clients with continuing obligations, as appropriate.

3 SCOPE OF SERVICES

This Phase I ESA is based on:

- Interviews with past and/or present owners, operators, and/or occupants of the Property.
- Reviews of federal, tribal, state, and local government records.
- Visual inspections of the Property and adjoining properties performed on June 17, 2022.
- Review of historical Property use information (topographic maps, aerial photographs, fire insurance maps, existing reports, etc.).
- Commonly known or reasonably ascertainable information about the Property (e.g., interviews with appropriate regulatory agency personnel and review of agency files review of available documents, interviews with other knowledgeable persons).
- Degree of obviousness of the presence or likely presence of contamination at the Property, and the ability to detect the contamination by appropriate investigation.
- Information provided as a result of the additional inquiries conducted by the User.

4 SPECIAL TERMS AND CONDITIONS

This Phase I ESA for the Building 14B Site, located in Perris, California, has been prepared specifically for Majestic Realty Co. The report has been prepared in accordance with the care and skill generally exercised by reputable professionals, under similar circumstances, in this or similar localities. No other warranty, express or implied, is made as to the professional opinions presented herein.

No other party, known or unknown to SCS, is intended as a beneficiary of this work product, its content, or information embedded therein. Third parties use this report at their own risk. Third party reliance letters may be issued on request to SCS subject to approval of Majestic Realty Co. and payment to SCS of a fee for such letters.

5 LIMITATIONS AND ASSUMPTIONS

The investigation focuses on releases and threatened releases of hazardous substances or petroleum products that could be considered a recognized environmental condition (REC) and/or a liability due to their possible presence in significant concentrations (e.g., above acceptable limits set by the federal or state government) or due to the potential for contaminant migration through exposure pathways (e.g., soil vapor migration or groundwater ingestion). Materials that may contain substances which are not currently deemed hazardous by the U.S. Environmental Protection Agency (EPA) or California Environmental Protection Agency (CalEPA) were not considered as part of this study.

Unless specifically included in our scope of services, formal surveys for asbestos-containing materials, lead-based paints, fire safety, vapor intrusion, indoor air quality, mold, and similar matters were not part of this assessment. The Property was not evaluated for compliance with land use, zoning, wetlands, or similar laws. This report is not intended to be an environmental compliance audit.

Hazardous substances naturally occurring in plants, soils, and rocks (e.g., heavy metals, naturally occurring asbestos, or radon) are not typically considered in these investigations. Similarly, construction debris (e.g., discarded concrete, asphalt, etc.) is not considered to be of concern unless observations suggest that hazardous substances are likely to be present in significant concentrations.

Unless otherwise noted, sampling and laboratory analyses of soil, water, air, building materials, or other media, were not performed as part of this investigation. Positive identification of hazardous substances can only be accomplished through sampling and appropriate laboratory analysis.

SCS Engineers assumes no responsibility for the accuracy of information obtained from, compiled by, or provided by third-party sources, such as regulatory agency listings. Unless obviously inaccurate or if information exists to the contrary, SCS Engineers assumes that information collected during this environmental site assessment is accurate and correct. Unless warranted, information collected has not been independently validated as part of this assessment.

The following information is the responsibility of the User (40 CFR 312.22) and is not included in this Phase I ESA/ is addressed in a questionnaire provided to the User and attached to this report as **Appendix G:**

- Specialized knowledge or experience of the User.

- The relationship of the purchase price to the fair market value of the Property. The purchaser of a Property is required to consider whether any differential between the purchase price and the fair market value of the Property is due to the presence of releases or potential releases of hazardous substances at the Property.

Certain other limitations could affect the accuracy and completeness of this report, as follows:

- Site Access Limitations – None.
- Physical Obstructions to Observations – None.
- Outstanding Information Requests – None.
- Historical Data Sources Failure – None.
- Other Limitations – None.

6 GENERAL SITE CHARACTERISTICS

SITE LOCATION

The Property, which is not currently associated with an assigned address, is located west of Harvill Avenue between Commerce Center Drive and Perry Street. The Property includes Assessor's Parcel Numbers (APNs): 314-280-001 through -003, eastern portion of 314-280-007 and 314-270-009 and -010. An APN map is provided as **Figure 2** in **Appendix A**.

GENERAL SITE DESCRIPTION

The Property comprises approximately 10.11 acres of undeveloped land, mostly covered with dry vegetation. It has previously been graded and terraced.

ADJOINING PROPERTY USE

- North – Commerce Center Drive adjoins the Property immediately to the north. Undeveloped land is located across the street to the north.
- South – Perry Street, a dirt road, adjoins the Property immediately to the south. Undeveloped land is located across the road to the south. A new industrial warehouse building was under construction across the road to the southwest.
- East – Harvill Avenue adjoins the Property immediately to the east. A new industrial development is in the early stages of construction across the street to the east (grading and footing installation).
- West – Majestic Freeway Business Center – Undeveloped land adjoins the Property to the west (Building 14A Site).

7 PHYSICAL SETTING

PHYSIOGRAPHIC SETTING

According to the U.S. Geological Survey (USGS), Steele Peak, California 7.5-minute topographic maps, the Property is located in the northern portion of the Moreno Valley (also known as the Perris Valley) at an elevation of approximately 1,520 to 1,530 feet above mean sea level. Site topography is generally flat with a slight regional slope to the east.

GEOLOGY AND SOILS

According to the Dibblee Geologic Map of the Steele Peak Quadrangle (2003), the Property is underlain by unconsolidated Quaternary alluvial surficial sediments and older surficial sediments consisting of sand that is commonly pebbly and alluvial fan gravel at the base of hill terranes. The Moreno Valley is filled with alluvium to an average depth of 1,500 feet below ground surface (bgs). The alluvium consists of alternating layers of impermeable, fine-grained, clay-rich strata and permeable zones of sand and gravel, which represent buried stream channels. These permeable zones occur as lenses and stringers that are not laterally or vertically continuous over extensive areas.

GROUNDWATER

The Property lies within the Perris North Groundwater Basin. The alluvial deposits in the Moreno Valley contain large quantities of aquifer water that is widely used as a water supply. Based on review of recent data contained in the March Air Reserve Base Groundwater Monitoring Program Report, groundwater is estimated to be approximately 120 feet bgs in the vicinity of the Property. Direction of groundwater flow is anticipated to be to the east-southeast.

RADON

According to the California Department of Public Health's February 2016 Radon Program report, screening in the area of the Property (92570 zip code) found no locations (out of five tested) where buildings had radon levels greater than or equal to 4 picocuries per liter (pCi/L), the EPA action level (**Appendix D**). The maximum radon result for the Property's zip code was 1.7 pCi/L. Note that elevated radon levels may also be attributed to other radon sources such as leaking natural gas or numerous building products such as drywall, cinderblock, concrete floors, brick, or stone products. Based on the available information, elevated radon gas is not expected in the area of the Property.

8 SITE INSPECTION

Christopher Virgen and Justin Rauzon of SCS conducted an inspection of the Property and surrounding area on June 17, 2022. An aerial image showing the Property is provided as **Figure 3** in **Appendix A**. Photographs of the Property are provided in **Appendix B**.

Access to the Property was authorized by Ms. Linda Casey of Majestic. At the time of the site inspection, the Property was vacant and undeveloped. It is largely covered with dry, brushy vegetation. A small pile of concrete rubble was present on the northwestern portion of the Property.

HAZARDOUS SUBSTANCES

Eleven one-gallon motor oil containers were observed in a pile on the northwestern portion of the Property, immediately south of Commerce Center Drive. There was no evidence of leaks from the containers, which likely contained waste oil illegally discarded.

No other hazardous substances or hazardous wastes were observed at the Property.

NATURAL DRAINAGE

Natural waterways are not currently located on the Property. Stormwater at the Property infiltrates into the ground or flows overland to the adjoining streets, ultimately joining the municipal storm sewer.

DISTURBED AREAS

Small amounts of windblown trash were observed across the Property, but there was no evidence of landfilled materials.

ELEVATORS AND OTHER HYDRAULIC EQUIPMENT

No elevators or other hydraulic equipment were observed at the Property.

WELLS

No monitoring or water supply wells were observed on the Property or in the immediately surrounding area.

ELECTRICAL EQUIPMENT

No electrical transformers or other equipment that likely contains polychlorinated biphenyls (PCBs) were observed at the Property.

WASTEWATER

Sanitary and industrial wastewaters are not currently generated at the Property.

DRINKING WATER

Drinking water is not currently supplied to the Property.

STORAGE TANKS

No evidence (fill ports, vent lines, or dispensers) of underground storage tanks (USTs) was observed on the Property. No aboveground storage tanks (ASTs) were observed on the Property.

VISUAL INSPECTION OF ADJOINING SITES

No obvious evidence of a REC or indications of contamination (e.g. remediation equipment, staining, USTs, etc.), were observed on adjoining sites during the site inspection.

9 INTERVIEWS

SCS interviewed Ms. Cassey of Majestic about the Property by telephone. She referred SCS to the previous environmental reports discussed in Section 11 of this report.

10 SITE HISTORY

Site history was evaluated from the following sources:

- Historical USGS, Steele Peak, California 7.5-minute topographic map for the year 2018 and topographic maps provided by Environmental Data Resources (EDR) (June 10, 2022).
- Historical aerial photographs provided by EDR (June 10, 2022).
- A search was made of the EDR-Sanborn collection and no maps of the Property were found (June 10, 2022).
- Because the Property is not associated with any known addresses and other historical records did not indicate historical onsite structures, SCS did not review building department records.
- A City Directory review report provided by EDR (June 10, 2022).

Copies of historical topographic maps, historical aerial photographs, city directories, and the EDR Sanborn map report showing no coverage are included in **Appendix C**.

Year	Description	Source
Pre-1900	The general area of the Property was part of Rancho El Sobrante de San Jacinto during the Spanish/Mexican periods and the early 19 th Century. During that time, the land was likely used for sheep and cattle grazing. In 1881, when the Southern California Railroad decided to build a railroad through the valley, Fredrick Perris was charged with surveying and constructed the route. Following the construction of the railroad line and rail stop, the City of Perris grew up around the depot.	Online history
1901	The Property and immediately adjoining sites were undeveloped land. A few dirt roads were located in the general vicinity. Railroad tracks were located approximately 0.15 miles east.	Topographic map
1938	The Property was undeveloped land, possibly used for dryland farming. A dirt road adjoined the Property to the south.	Aerial Photo

Year	Description	Source
1942, 1947	No significant changes from the 1901 topographic map were noted on the Property or adjoining sites, except that a dirt road was present to the south.	Topographic maps
1949, 1953, 1959	No significant changes from the 1938 aerial photo or 1947 topographic map were noted on the Property. The dirt road to the west was no longer present. The road to the south was labeled as Perry Street.	Aerial photos and Topographic map
1961	The Property and adjoining sites remained undeveloped, possibly with agricultural use. Some grading activities were visible on portions of the Property and offsite to the north and east.	Aerial photo
1967, 1973, 1974	No significant changes from the 1961 aerial photo were noted on the Property or adjoining sites. The dirt road was again present to the west of the Property.	Aerial photo and Topographic map
1978	No significant changes from the 1974 topographic map were noted on the Property or adjoining sites.	Aerial Photo and Topographic Map
1985	No significant changes from the 1978 aerial photo and topographic map.	Aerial Photo
1989	No significant changes from the 1985 aerial photo were noted on the Property or adjoining sites.	Aerial Photo
1990	No significant changes from the 1989 aerial photo were noted on the Property or adjoining sites.	Aerial Photo
1994	The Property appeared recently graded, as did the adjoining sites.	Aerial Photo
2002	No significant changes from the 1994 aerial photo were noted on the Property, except a graded area in the center of the Property. The Property had been terraced. The current roads adjoining the Property to the north, south, and east were now present.	Aerial Photo
2006	No significant changes from the 2002 aerial photo were noted on the Property or adjoining sites.	Aerial Photo
2009	No significant changes from the 2006 aerial photo were noted on the Property or adjoining sites.	Aerial Photo
2012	No significant changes from the 2009 aerial photo were noted on the Property or adjoining sites.	Aerial Photo and Topographic Maps

Year	Description	Source
2015, 2016, 2018	No significant changes from the 2012 aerial photo were noted on the Property or adjoining sites	Aerial Photo and Topographic Maps

HISTORICAL USE SUMMARY

The Property has been undeveloped or agricultural land since the early-1900s. It was graded and terraced between 1994 and 2002.

The existence of past agricultural activities on the Property and in adjacent areas indicates a potential for pesticide and/or heavy metal (associated with dusting powders) contamination. In SCS's experience, it is not uncommon to find trace levels of pesticides in soils at former agricultural areas in Southern California. However, these trace concentrations are rarely cause for environmental concern. It is our opinion that, without specific evidence of pesticide storage or mismanagement on the Property, past use for agricultural purposes does not represent a significant environmental concern and collection and analysis of soil samples for pesticides is unwarranted.

HISTORICAL USE OF ADJOINING SITES

The area surrounding the Property was also primarily undeveloped land from the early 1900s through the present. In 2002, the roads adjoining the Property were new or were improved.

11 COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

In order to identify commonly known or reasonably ascertainable information about the Property, SCS attempted to review previous environmental reports and various regulatory agency files and interviewed regulatory agency personnel. The following information was identified.

PREVIOUS ENVIRONMENTAL REPORTS

Majestic Realty provided a previous site investigation report for review:

- SCS Engineers, November 2004. *Phase I Environmental Assessment: Majestic Freeway Business Center, 88-8 Bond Property, Perris, California*. SCS Project No. 01204204.00.
- SCS Engineers, November 2004 (Updated to February 2005). *Phase I Environmental Assessment: Majestic Freeway Business Center, 88-8 Bond Property, Perris, California*. SCS Project No. 01204204.00.

A copy of the 2005 updated Phase I ESA report is provided in **Appendix D**.

SCS Engineers

In November 2004, SCS prepared a Phase I ESA of 108 parcels (not all contiguous) located along the west side of the Escondido Expressway (I-215) and AT&SF Railroad between the Riverside National Cemetery and Cajalco Expressway. The 2004 Phase I ESA included only the southwestern corner of the Property (Parcel -026). In February 2005, SCS perform did not include the Property.

The assessed area was largely vacant, undeveloped land covered with natural vegetation. Based on the results of the 2004 and 2005 Phase I ESAs, SCS did not identify any RECs in connection with the Property.

REGULATORY AGENCY RECORDS

Local regulatory agencies and other sources were contacted in an effort to identify any known or suspected contamination sites or incidents of hazardous waste storage or disposal, which might have resulted in soil and/or groundwater contamination, or volatile organic compound (VOC) vapor migration to the Property. Generally, this includes records for the Property and adjacent parcels, although relevant information for other sites of possible interest in the area (up to one mile) may also be included. Within the City of Perris, the Riverside County Department of Environmental Health (RCDEH) generally acts as the lead enforcement agency for UST compliance. If a tank has leaked and groundwater contamination is suspected, the Santa Ana Regional Water Quality Control Board (SARWQCB) generally becomes the lead agency in supervising contaminant characterization and cleanup.

California Environmental Protection Agency Files

The Property is not a listed site on the California Environmental Protection Agency (CalEPA) Regulated Site Portal website (**Appendix D**).

Santa Ana Regional Water Quality Control Board Files

The Property does not appear as a listed site on the State Water Resources Control Board (SWRCB) GeoTracker website. Recent SARWQCB case files, if any, would be listed on this website (**Appendix D**).

Department of Toxic Substances Control Files

The Property does not appear as a listed site on the California Department of Toxic Substances Control (DTSC) EnviroStor website. Recent DTSC case files, if any, would be listed on this website (**Appendix D**).

South Coast Air Quality Management District Files

The Property does not appear as a listed facility on the South Coast Air Quality Management District (AQMD) online Facility Information Detail (FIND) website (**Appendix D**).

Riverside County Department of Environmental Health Files

Since the Property is undeveloped land and is not associated with any known addresses, SCS did not submit an RCDEH file request for the Property.

12 REVIEW OF FEDERAL, STATE, TRIBAL, AND LOCAL GOVERNMENT DATABASES

A database search for sites listed on various federal, state, tribal, and local databases in the area around the Property was obtained from EDR (June 10, 2022). A description of each of the databases searched is included in the report, which is attached as **Appendix E**. Among the databases included in the EDR report are NPL (federal, tribal, and state-equivalent), proposed and

delisted NPL, CORRACTS (RCRA facilities subject to corrective actions), hazardous waste sites identified for investigation or remediation (SEMS [Superfund Enterprise Management System, formerly known as CERCLIS], State CERCLIS, VCP, Brownfields Calsites, etc.), LUST, sites with engineering controls, former CERCLIS (NFRAP), RCRA and state hazardous waste generators, ERNS, SWLF, USTs, and Toxic Pits.

Review of these records satisfies all requirements as set forth in 40 CFR Section 312.26 (b) and (c) with regard to the review of federal, tribal, and state government records of databases of such government records and local government records and databases of such records pertaining to both the Property and the nearby or adjoining properties. Further, the search distances for each particular database are as specified in 40 CFR 312.26 and ASTM E1527-13.

Any known or suspected contaminated sites included on these lists within 0.25 miles of the Property are discussed in the following text. As a general rule, sites beyond 0.25 miles are not anticipated to impact a site significantly. Any sites beyond 0.25 miles with a high potential to impact the Property are also discussed. (Please note: the distances and directions listed in this report have been field verified and might not always match those in the EDR report.)

Sites such as TSD facilities, hazardous waste generators, HAZNET, FINDS, SQGs, LQGs, USTs, HIST UST, RCRA violations, and TRIS facilities with toxic chemical releases (generally in accordance with permitting requirements - into the air, water, or land as reported under SARA Title III) use or store hazardous materials and thus may pose a potential problem in the event of a spill or leak. However, unless these sites also appear in an agency list of contaminated sites, there is no evidence of any problems at this time. Therefore, sites on these lists will not be discussed unless on or in close proximity to the Property.

Please refer to **Appendix E** for further information on these sites.

PROPERTY LISTINGS

The Property is not listed in any of the databases searched by EDR.

ADJACENT SITE LISTINGS

No adjoining sites were listed in the EDR database report.

OTHER DATABASE SITES

The EDR report provides a summary table of regulatory database sites within specified distances of the Property, including standard environmental records, additional environmental records, high risk historical records, and recovered governmental records. This summary table is provided beginning on Page 4 of the EDR report (**Appendix E**). In addition to the adjacent site listings discussed above, SCS identified the following sites of concern within 0.25 miles of the Property:

Painted Rhino, Fiber Glass Manufacturer, 22850 Perry Street (approximately 635 feet to the west of the Property). This fiberglass manufacturing facility reportedly stores compressed gases, acetone, resin, and gel coat, and generates acetone sludge. CalEPA and the EDR report indicate minor violations such as missing labels, missing lid on resin, fire extinguisher not properly maintained, and missing records for the facility circa 2018 to 2021. Based on the information in the database report, there is no evidence of releases at this site that would negatively affect the environmental condition of the Property.

Green Bee Yard, 18890 Seaton Avenue (approximately 770 feet to the south of the Property). This facility was listed on the RCRA-SQG database. This industrial facility reportedly stores ignitable waste, cadmium, chromium, and lead. No violations are listed for this facility. Based on the information in the database report, there is no evidence of releases at this site that would negatively affect the environmental condition of the Property.

March Air Force Base/March ARB (approximately one mile northeast of the Property) – DOD, NPL, SEMS, RCRA-LQG, UST ENG CONTROLS, US INST CONTROLS, ROD, and PRP – March ARB has been used for aircraft maintenance and repair, refueling operations, and training activities since 1918. Beginning in 1980, efforts began to identify and clean-up hazardous waste sites on the base. Eventually, forty-four separate sites within the base were identified as contaminated sites. These included fire training areas, landfills, underground tank installations, an engine test cell, and recorded spills. The identified areas of contamination included three zones of groundwater contamination. Continued investigations determined that the contamination had migrated off base and impacted private wells downgradient (southeast) of the base. Groundwater supply wells on the base and contaminated wells off base were shut down in the late 1980s.

By the early 1990s, most of the source areas of the contamination had been remediated. The most recent information suggests that attempts to remediate groundwater beneath the base and prevent its continued migration off base have been largely successful through a groundwater extraction and treatment system (GETS) installed in the early 1990s to remove VOCs such as trichloroethene (TCE) and tetrachloroethene (PCE). Based on this information, the results indicate that the March ARB extraction well treatment program has been effective.

Remedial efforts are ongoing. The system was expanded (EGETS) between 1996 and 1997 with the installation of additional groundwater extraction wells, injection wells, and system monitoring wells. The EGETS was expanded (EGETS2) once again from April through August 2020 (AECOM, 2020). However, no attempt has been made to clean-up contaminated groundwater off base. A risk assessment determined the off-base downgradient VOC plume is within an acceptable cancer risk level. The selected remedy for the off-base plume is through natural attenuation. Based on a review of groundwater maps, groundwater plumes at the main base are located cross- and downgradient of the Property.

March ARB Operable Unit 2 (OU-2) comprised the western portion of the base, situated at least 1.3 miles north of the Property. Records of Decision (RODs) have been issued for various areas within OU-2, some requiring no further action and some with institutional controls and continued groundwater monitoring. Groundwater flow direction at Camp Y, the area nearest to the Property, is consistently shown to migrate towards the east and sometimes to the east-northeast. This makes the OU-2 area cross-gradient relative to the Property. Based on a review of March ARB information, including plume maps, reported groundwater flow direction, and distance, the March ARB NPL site is not anticipated to negatively affect the environmental condition of the Property.

Other sites listed in the EDR database report are also not anticipated to have a negative effect on the environmental condition of the Property.

UNMAPPABLE OR ORPHAN SITES

Three unmappable sites were identified in the EDR report. Unmappable sites cannot be plotted due to inaccurate or incomplete addresses. Based on a review of the provided data, including the estimated relative locations of the unmappable sites, one of the listings has the same name as the development that contains the Property and is identified as being on the south adjoining site, as

discussed below. The other two listings are not near the Property and it appears unlikely that these sites have adversely affected the environmental condition of the Property.

Majestic Freeway Business Center Phase 1 – CIWQS List (NWC Harvill Avenue and Perry Street). The listing was identified as commercial stormwater construction effective 2006 to 2010, and the listing has been terminated. No violations or enforcement actions were listed within 5 years. The time this listing was active appears coincide with when the roads adjoining the Property were developed. It appears unlikely that this listing has adversely affected the environmental condition of the Property.

LANDFILLS

According to the EDR-provided review of the California Department of Resources Recycling and Recovery (CalRecycle) Solid Waste Information System, no landfill facilities were identified within 0.5 mile of the Property.

OIL AND GAS WELLS

Available oil and gas well maps from the California Department of Conservation, Geologic Energy Management Division (CalGEM) were reviewed to identify oil and gas wells on the Property or in the nearby area. According to the CalGEM Well Finder online database, the property is not located within the boundaries of a delineated oil and gas field.

A map showing the location of the Property relative to nearby oil and gas wells is provided in **Appendix D**. No oil and gas wells are located on the Property or within one mile of the Property.

NATIONAL PIPELINE MAPPING SYSTEM

SCS reviewed the National Pipeline Mapping System (NPMS) website for the Property and surrounding area to identify any hazardous materials pipelines. The NPMS is a geographic information system (GIS) created by the U.S. Department of Transportation, Pipeline and Hazardous Materials Safety Administration (PHMSA), and Office of Pipeline Safety (OPS) in cooperation with other federal and state governmental agencies and the pipeline industry. The NPMS consists of geospatial data, attribute data, public contact information, and metadata pertaining to the interstate and intrastate hazardous liquid trunklines and hazardous liquid low-stress lines as well as gas transmission pipelines, liquefied natural gas (LNG) plants, and hazardous liquid breakout tanks (tanks that receive and store liquids transported by pipeline) jurisdictional to PHMSA. The nominal accuracy of geospatial data in the NPMS is +/-500 feet. The NPMS does not contain information on interconnects, pump and compressor stations, valves, direction of flow, capacity, throughput, or operating pressure. In addition, distribution and gathering pipelines are not included in the NPMS.

The NPMS is built from data submitted by pipeline, LNG plant, and breakout tank facility operators. Since 2002, transmission pipeline and LNG plant facility operators are required to submit mapping information to the NPMS and to update their submissions annually. Breakout tank operators are able to submit data to the NPMS on a voluntary basis.

Based on review of the NPMS website, there are no hazardous materials pipelines within one mile of the Property.

13 USER PROVIDED INFORMATION

A User Questionnaire was not returned to SCS for inclusion in the report. The User provided no information beyond what is discussed above.

TITLE RECORDS

No title report was provided to SCS for review.

ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS

No information regarding environmental liens or activity and use limitations was provided to SCS. No environmental liens or activity/use limitations were identified by SCS during the course of this assessment.

SPECIALIZED KNOWLEDGE

No specialized knowledge regarding the Property was provided to SCS by the User.

VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

No property valuation information was provided to SCS.

14 DEGREE OF OBVIOUSNESS OF THE PRESENCE/LIKELY PRESENCE OF CONTAMINATION ON THE PROPERTY

As discussed above, the Property has been undeveloped or possibly agricultural land since the early 1900s. No historical activities on the Property are considered a likely source of contamination

15 DATA GAPS

A data gap represents an inability on the part of the environmental professional to obtain information required by the standards and practices of 40 CFR 312 to fully identify conditions indicative of releases or threatened releases of hazardous substances on, at, in, or to the Property.

No data gaps were identified during the preparation of this Phase I ESA.

16 FINDINGS AND OPINIONS

Based on the scope of work performed, SCS finds the following:

The Property, which is not currently associated with an assigned address, is located west of Harvill Avenue between Commerce Center Drive and Perry Street. The Property encompasses an area of approximately 10.11 acres, mostly covered with dry vegetation. It was previously graded and has been terraced. No areas of environmental concern were identified at the Property during the site inspection.

The Property has been undeveloped or agricultural land since the early-1900s. It was graded and terraced between 1994 and 2002. One small pile of concrete rubble was observed on the northwestern portion of the Property. Approximately 11 one-gallon motor oil containers, likely containing waste oil, were also observed on the northwestern portion of the Property. There was no evidence the oil containers had leaked.

Regulatory database information identified few known and suspected contamination sites in the area surrounding the Property. Based on a review of the available information, it is unlikely that any of these sites has negatively affected the environmental condition of the Property.

Conclusions

In summary, SCS performed a Phase I ESA of the Majestic Freeway Business Center - Building 14A site located in Perris, California, in conformance with the scope and limitations of 40 CFR 312 and ASTM E1527-13. Any exceptions to, or deletions from, this practice are described in Section 5 of this report.

In the opinion of the Environmental Professionals, this assessment has revealed no evidence of conditions indicative of releases or threatened releases of hazardous substances. Further investigation is not recommended.

18 GLOSSARY/DEFINITIONS

AAI – All Appropriate Inquiry

AUL – Activity and Use Limitations

BER – A business environmental risk is a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice.

BTEX – Benzene, toluene, ethylbenzene, and total xylenes

CERCLA – Comprehensive, Environmental Response, Compensation, and Liability Act

CERCLIS – Comprehensive Environmental Response, Compensation, and Liability Information System

CFR – Code of Federal Regulations

CORRACTS – Corrective Action Against Responsible Parties at a RCRA site

CREC – Controlled Recognized Environmental Condition: A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (e.g., property use restrictions, AULs, or institutional or engineering controls).

DOGGR – Department of Oil, Gas, and Geothermal Resources

De Minimis Condition – A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis conditions* are not RECs or CRECs.

DTSC – California EPA Department of Toxic Substances Control

EDR – Environmental Data Resources, Inc.

EPA – Environmental Protection Agency

ERNS – Emergency Response Notification System

ESA – Environmental Site Assessment

FINDS – Facility Index System

HAZNET – California EPA Hazardous Waste Facility and Manifest Data

HREC – Historical Recognized Environmental Condition: A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls

LOG – Large Quantity Hazardous Waste Generator

LUST – Leaking Underground Storage Tank

MCL – Maximum contaminant level

MTBE – Methyl-tert-butyl-ether

NFA – No Further Action determination

NFRAP – No Further Remedial Action Planned

NPL – National Priority List (Superfund)

PAHs – Polynuclear aromatic hydrocarbons

PCBs – Polychlorinated biphenyls

RCRA – Resource Conservation and Recovery Act

RCRIS – Resource Conservation and Recovery Information System

REC – *Recognized environmental condition* is defined by ASTM E 1527-13 as: “The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. *De minimis conditions are not recognized environmental conditions.*”

ROD – Record of Decision

RBSLs – Risk-based Screening Levels

RSLs – Regional Screening Levels

RWQCB – Regional Water Quality Control Board

SARA – Superfund Amendments and Reauthorization Act

SLIC – Spills, Leaks, Investigations, and Cleanups database

SQG – Small Quantity Hazardous Waste Generator

SWIS – Solid Waste Information System

SWLF – Solid Waste Facility/Landfills

TPH – Total Petroleum Hydrocarbons

TRIS – Toxic Release Inventory System

TSD – Treatment, Storage, and/or Disposal Facility

User – The person or persons seeking to establish the innocent landowner defense, bona fide prospective purchaser liability protection, and/or contiguous property owner liability protection pursuant to CERCLA sections 101 and 107.

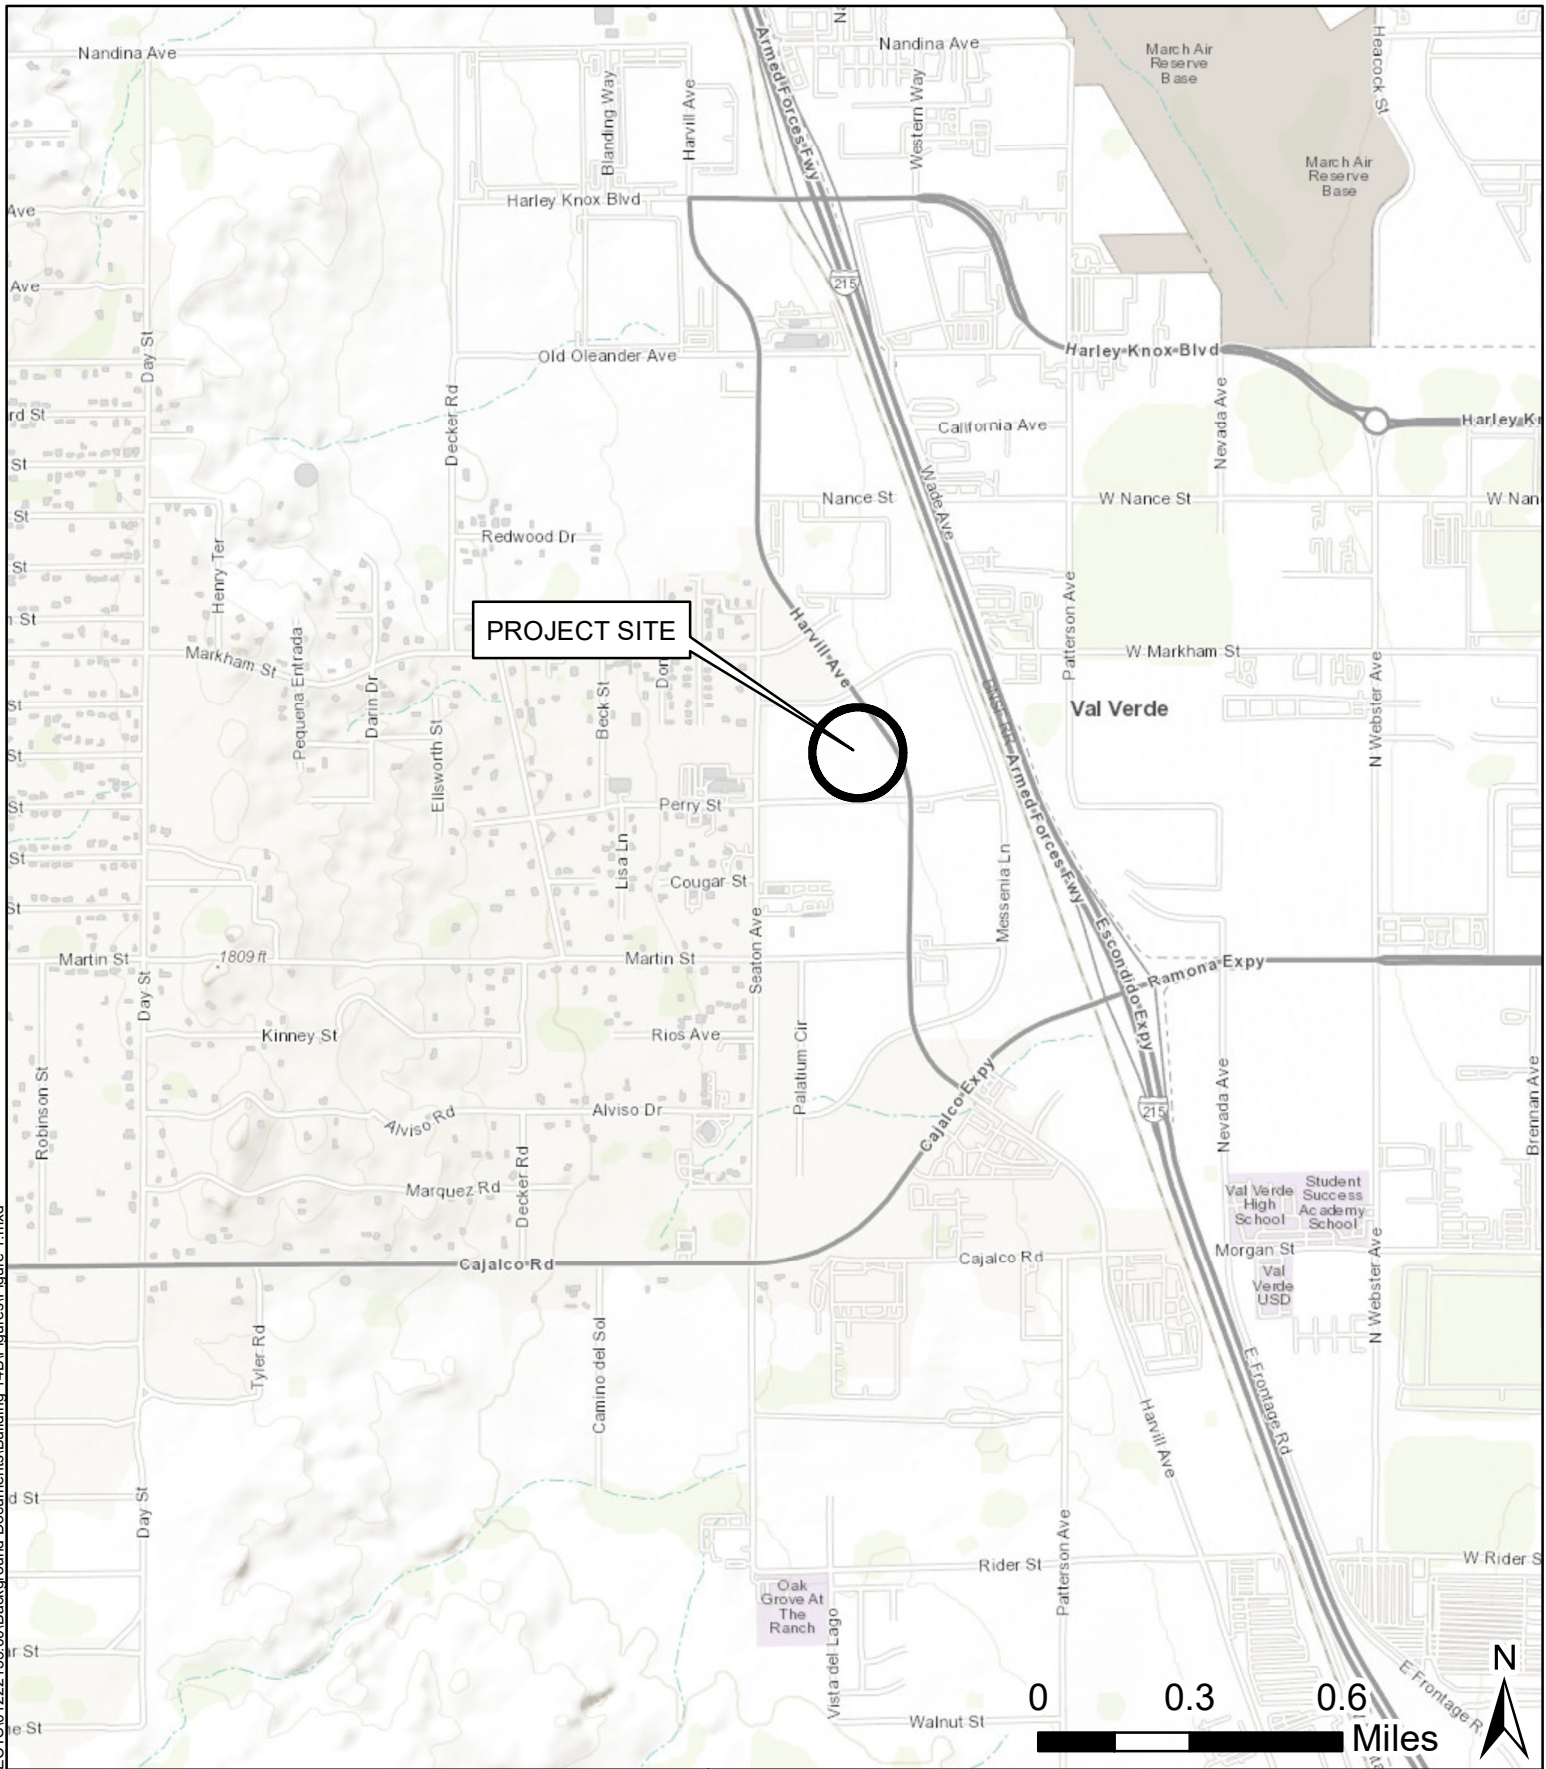

USGS – United States Geologic Survey

UST – Underground Storage Tank

VCP – Voluntary Cleanup Program

VOCs – Volatile organic compounds

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

Site Name:

Majestic Fwy Building Center
Buildings 14A & 14B
Perris, CA 92570
EDR Inquiry # 7013929.4

Client Name:

SCS Engineers
3900 Kilroy Airport Way
Long Beach, CA 90806
Contact: Kim Braun

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by SCS Engineers were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDR's Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

Coordinates:

P.O.#	NA	Latitude:	33.849427 33° 50' 58" North

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by SCS Engineers were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # 1FE5-41A8-BA7F
PO # NA
Project 01222155.00 T2

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 1FE5-41A8-BA7F

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

SCS Engineers (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

**SUBJECT: UPDATED PHASE I ENVIRONMENTAL ASSESSMENT, 88-8 BOND
PROPERTY, PERRIS, CALIFORNIA**

Dear Ms. Casey

Enclosed are three copies of the subject report. No recognized environmental conditions were identified on the site, and no further investigations were recommended. However, we did identify a machine shop on one parcel and have recommended a re-inspection of that parcel whenever access can be secured. Should you have any questions about this report, please feel free to call Mr. Tom Dong or the undersigned.

Sincerely,

J. Rodney Marsh, REA
Project Manager
SCS ENGINEERS

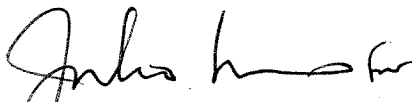

Inc.

This Phase I Environmental Assessment Report for the Majestic Freeway Business Center (88-8 Bond Property) located in Perris, California, dated November 2004 (updated to February 2005), was prepared by J. Rodney Marsh and reviewed by Thomas Dong.

EXECUTIVE SUMMARY

SCS Engineers (SCS) was retained by Majestic Realty to prepare a Phase I Environmental Assessment of the Majestic Freeway Business Center (88-8 Bond Property) located in Perris, California (the "Property"). This assessment was performed in general conformance with ASTM E1527-00 guidelines for Environmental Assessment Reports.

The Property consists of 150 assessor's parcels located along the west side of the Escondido Expressway (I-215) and AT&SF Railroad between the Riverside National Cemetery and Cajalco Expressway. The combined area of the parcels (some of which are discontinuous) is approximately 250 acres.

The Property is currently largely vacant and undeveloped and overgrown with natural vegetation. Most of the Property appears to have been either agricultural or recently (within the last six months) graded. Small amounts of trash and debris were observed on several of the parcels. No appreciable staining was noted on the soil in these areas. No evidence of the past use, storage, manufacture, or disposal of hazardous substances was observed on the Property, with the possible exception of the Perris Valley Machine Works, a machine shop located at the southeast corner of Harvill and Old Oleander Avenues.

The parcel occupied by the Perris Valley Machine Works is a potential concern as machine shops may use oils and solvents. The parcel did not appear to be paved. A more comprehensive inspection and possible site investigation is recommended for this parcel (314-040-027) whenever access can be secured.

Several soil piles and small mounds were noted that appeared to be artificial. Soil types observed on these elevations appeared to be consistent with those observed elsewhere on the Property, suggesting that these mounds were created with soil from the Property, perhaps during the development of the various roads traversing the area. If the soils were brought in from off site, limited testing might be warranted to ensure that contaminated soil was not placed on the Property. However, as these soils are likely to be graded, spread across the Property, and incorporated into the native soils, any such contamination is likely to be de minimis.

The Property was undeveloped agricultural land from at least 1953 through the present. No evidence of structures was found on the Property. The streets traversing the Property appear to have been constructed between 1986 and 1997.

Regulatory database information identified few known and suspected contamination sites in the area surrounding the Property. It is unlikely that any of these sites have impacted the Property directly. However, the presence of the March AFB Superfund Site to the north and northeast continues to pose a threat to the groundwater beneath the Property, although based on the current status of the cleanup activities, the threat would appear to be minimal.

In summary, SCS has performed a Phase I Environmental Site Assessment of the Majestic Freeway Business Center (88-8 Bond Property) located in Perris, California, in general conformance with the scope and limitations of ASTM Practice E1527-00. This assessment has revealed no evidence of recognized environmental conditions in connection with the Property.

With the exception of a follow-up inspection of the Perris Valley Machine Works parcel, no further investigations are recommended.

**PHASE I ENVIRONMENTAL ASSESSMENT
MAJESTIC FREEWAY BUSINESS CENTER
88-8 BOND PROPERTY
PERRIS, CALIFORNIA**

INTRODUCTION

SCS Engineers (SCS) was retained by Majestic Realty to prepare a Phase I Environmental Assessment of the Majestic Freeway Business Center (88-8 Bond Property) located in Perris, California (the "Property"). A location map for the Property is presented as Figure 1 in Appendix A. This assessment was performed in general conformance with ASTM E1527-00 guidelines for Environmental Assessment Reports.

PURPOSE

The purpose of this investigation was to identify any recognized environmental conditions as defined in ASTM Standard E1527-00:

"...the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies."

This assessment is intended to constitute an appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice, as required by the innocent landowner defense under the Comprehensive Response, Compensation, and Liability Act of 1980 (CERCLA a.k.a. Superfund), the Superfund Amendments and Reauthorization Act of 1986 (SARA), and the Small Business Liability Relief and Brownfields Revitalization Act of 2002. This process satisfies one requirement to qualify for the innocent landowner defense to CERCLA liability.

SCOPE OF WORK

This Phase I Environmental Assessment is based on:

- Field observations made during Property reconnaissance performed on November 4, 2004 and February 7, 2005.
- Review of federal, state, and local regulatory databases. The search distances are those specified by ASTM E1527-00.

- Review of historical Property use information (topographic maps, aerial photographs, fire insurance maps, existing reports, etc.).
- Interviews with appropriate regulatory agency personnel and review of agency files.

SPECIAL TERMS AND CONDITIONS

Property Access

The Property was largely vacant, undeveloped, and unfenced. There were no restrictions on site access except for the interiors of approximately six residences and a machine shop located on the Property.

Use by Third Parties

This Phase I Environmental Assessment for the Majestic Freeway Business Center (88-8 Bond Property), Perris, California has been prepared specifically for Majestic Realty. The report has been prepared in accordance with the care and skill generally exercised by reputable professionals, under similar circumstances, in this or similar localities. No other warranty, expressed or implied, is made as to the professional opinions presented herein. This report is not a legal opinion.

No other party, known or unknown to SCS, is intended as a beneficiary of this work product, its content or information embedded therein. Third parties use this report at their own risk. Third party reliance letters may be issued on request and upon approval of Majestic Realty and payment of a fee for such letters.

LIMITATIONS AND ASSUMPTIONS

The investigation focused on potential sources of hazardous substances or petroleum products that could be considered a recognized environmental condition and/or a liability due to their possible presence in significant concentrations (e.g., above acceptable limits set by the Federal or state government) or due to the potential for contamination migration through exposure pathways (e.g., groundwater). Materials that may contain substances which are not currently deemed hazardous by the federal or state of California EPA were not considered as part of this study.

Unless specifically included in our scope of services, formal surveys for asbestos-containing materials, lead-based paints, fire safety, indoor air quality, mold, and similar matters were not part of this assessment. The Property was not evaluated for compliance with land use, zoning, wetlands, or similar laws. This report is not intended to be an environmental compliance audit.

Hazardous substances naturally occurring in plants, soils, and rocks, (e.g., heavy metals, naturally occurring asbestos, or radon) are not typically considered in these investigations. Similarly, construction debris (e.g., discarded concrete, asphalt) is not considered to be of concern unless observations suggest that hazardous substances are likely to be present in significant concentrations.

Unless otherwise noted, sampling and laboratory analyses of soil, water, air, building materials, or other media, were not performed as part of this investigation. Positive identification of hazardous substances can only be accomplished through sampling and appropriate laboratory analysis.

SCS Engineers assumes no responsibility for the accuracy of information obtained from, compiled by, or provided by third-party sources, such as regulatory agency listings. Unless obviously inaccurate or if information exists to the contrary, SCS Engineers assumes that information collected during this environmental site assessment is accurate and correct. Unless warranted, information collected has not been independently validated as part of this assessment.

GENERAL SITE CHARACTERISTICS

Site Location and General Site Description

The Property consists of 150 assessor's parcels (Table 1, Appendix A) located along the west side of the Escondido Expressway (I-215) and AT&SF Railroad between the Riverside National Cemetery and Cajalco Expressway. Figures 2 and 3 show the layout of the Property. The combined area of the parcels (some of which are discontinuous) is approximately 250 acres. Roads bordering or traversing portions of the Property include Nandina Avenue (unimproved), Oleander Avenue (unimproved), Old Oleander Avenue (unimproved) Harvill Avenue, Markham Street, Commerce Center Drive, Perry Street, Messenia Lane, Martin Street, Seaton Avenue, and Palatium Circle. The Property is largely vacant and undeveloped except for a strip along either side of Harvill Avenue between Old Oleander Avenue and Nance. Several residences and a machine shop are located in this area.

Description of Adjoining Properties

Much of the land surrounding the Property is also vacant and undeveloped or agricultural. Exceptions would include the Riverside National Cemetery (on former March Air Force Base land) to the north, residential developments along the west side of Seaton Avenue, commercial and light industrial development along the south side of Cajalco Expressway, railroad-related services along the northeastern edge of the Property, and a retention basin at the northwest corner of Messenia Lane and Commerce Center Drive.

Just to the northeast of the northernmost portion of the Property is the Western Municipal Water District's March Wastewater Reclamation Facility, a small (0.75 MGD) wastewater treatment plant. This plant has been in existence since at least 1953, originally serving March Air Force Base to the north. Most of the treated water goes to water the Riverside National Cemetery and nearby golf courses.

ENVIRONMENTAL SETTING

Physiographic Setting

According to the U.S. Geological Survey (USGS), Steele Peak (1967, photorevised 1978), California 7.5-minute topographic map, the Property is located along the western side of the Moreno Valley at elevations of approximately 1,500 to 1,540 feet above mean sea level. Site topography is generally flat with scattered raised areas. The Property has a slight regional slope to the east.

Geology and Soils

The Property is situated within the Peninsular Ranges geomorphic province of southern California, which is primarily characterized by northwest trending mountain ranges. Surficial sediments in the area of the Property have been mapped as alluvial/fluvial deposits consisting of sand, silt, and clay (Santa Ana Watershed Project Authority).

Hydrogeology

The Property is located within the Perris North Subbasin of the Santa Ana River Basin (Eastern Municipal Water District, April 2004). The latest Groundwater Annual Report (April 2004) for year 2003 indicates that the average depth to groundwater in the Perris North Subbasin is approximately 140 feet below ground surface (bgs). Groundwater contours developed using Spring 2003 groundwater elevation data indicated that groundwater in the vicinity of the Property is located at depths of approximately 85 to 95 feet bgs and flows southwesterly.

Radon

According to the United States Geologic Survey's Report 93-292-1 "Geologic Radon Potential of EPA Region 9," screening in the area of the Property has produced a mean screening level of 0.7 pico Curies per liter of air (pCi/L). The California Environmental Protection Agency Department of Toxic Substances Control, formerly the Department of Health Services (DHS), has produced a report "California Statewide Radon Survey Interim results," which states that buildings surveyed in Southern California (including Riverside County) had average radon concentrations of 0.6 pCi/L. Fewer than 0.5 percent of the buildings surveyed in a six-county area had radon levels in excess of 4 pCi/L. The alluvial geology of the Moreno Valley is not normally associated with elevated radon levels. Based on the available information, therefore, elevated radon gas is not expected in the area of the Property.

SITE INSPECTION

An inspection of the Property and surrounding area was conducted on November 4, 2004, by J. Rodney Marsh of SCS. A sketch map and photographs of the Property are provided in Appendix B.

The Property is currently largely vacant and undeveloped and overgrown with natural vegetation. Most of the Property appears to have been either agricultural or recently (within the last six months) graded. Small amounts of trash and debris were observed on several of the parcels – notably 295-310-041, 295-310-042, 295-310-043, and 295-310-035. The debris included empty

drums and 5-gallon containers that appeared to have been used for roofing tar/asphalt. No appreciable staining was noted on the soil in these areas.

Several parcels along Harvill Avenue between Old Oleander Avenue and Nance are occupied by residences. The parcel at the southwest corner of Harvill and Old Oleander Avenues is occupied by a machine shop. These parcels were not accessible for close inspection. The machine shop parcel appeared to be unpaved.

Hazardous Substances

No evidence of the past use, storage, manufacture, or disposal of hazardous substances was observed on the Property, with the possible exception of the machine shop parcel.

Natural Drainage

A drainage channel was observed extending from the cul-de-sac terminus of Markham Street to the retention basin. The topographic map shows a seasonal creek roughly following the path of the current Cajalco Expressway. In general, though, natural waterways are not currently located on the Property. Runoff from the Property drains internally or to the surrounding streets.

Disturbed Areas

As noted above, scattered trash and debris were observed on the Property. In addition, several soil piles and small elevations were noted (parcels 314-110-004-5, 314-300-001-2, 317-100-016, and 317-100-017, and along the south side of Commerce Center Drive west of Harvill Avenue) that appeared to be artificial. Soil types observed on these elevations appeared to be consistent with those observed elsewhere on the Property, suggesting that these mounds were created with soil from the Property, perhaps during the development of the various roads traversing the area.

Elevators and Other Hydraulic Equipment

No evidence of the past existence of elevators or other subsurface hydraulic equipment was observed on the Property.

Wells

No monitoring or water supply wells were observed on the Property. The topographic map shows two wells along the eastern edge of the Property between Perry Street and Cajalco Expressway.

Electrical Equipment

No pole- or pad-mounted electric equipment was observed on or immediately adjacent to the Property. Overhead power lines were limited to Old Oleander Avenue, Seaton Avenue, portions of Harvill Avenue, and along the railroad tracks.

Wastewater

Not applicable.

Drinking Water

Not applicable

Storage Tanks

No evidence of past or present above- or underground storage tanks was observed on the Property.

Asbestos-Containing Materials

Not applicable.

Adjoining Site Observations

No recognized environmental conditions were identified on any of the immediately adjoining sites. A Circle-K service station is located across Cajalco Expressway south of the Property. Two industrial facilities (Diamond Pacific Products and a rail yard facility) are located on the east side of Harvill Avenue on the north and south sides of Old Oleander Avenue. Portions of the rail yard facility appeared to be used for the transfer of chemicals from trucks to tank cars. These areas are not immediately adjacent to any portion of the Property.

SITE HISTORY

Site history was evaluated from the following sources:

- U.S. Geological Survey (USGS), Steele Peak (1967, photorevised 1978), California 7.5 minute topographic map.
- Historical aerial photographs dating from 1953, 1961, 1967, 1978, 1986, 1997, and 2002 from the Rupp Aerial Photography Collection.

Copies of the aerial photographs are included in Appendix C.

Topographic Maps

The Property is depicted predominantly as vacant undeveloped land. No structures are shown on the Property. Agricultural use (orchards) is depicted in the area to the west of the current retention basin. Of the existing streets in the area, only Seaton Avenue, Cajalco Road, Markham Street (extending straight across the Property and not along its current path), the Escondion Expressway and the railroad were present in 1978.

Aerial Photographs

- 1953 - The 1953 photo showed only the northern half of the Property. This portion of the Property was vacant and undeveloped. The northernmost parcels (295-310-022 and -035) showed some evidence of having been cultivated in the past. Only two small structures, possibly houses, were visible between Markham Street and Nandina Avenue, and neither of these was on the Property. The area north of Nandina Avenue appeared to be housing associated with March Air Force Base.
- 1961 - The 1961 photo showed the entire site except for the two northernmost parcels. The remainder of the Property appeared to be under cultivation (grain or hay crops). No structures were visible on the Property. The few buildings visible in the area were located along Cajalco Road or east of the railroad.
- 1967 - The 1967 photo showed only the area between Seaton Avenue and the railroad tracks, from Nandina Avenue south to about Martin Street. This portion of the Property appeared to have been under cultivation, but otherwise showed no signs of development except for two small structures alongside the railroad tracks near the intersection of what is now Cajalco Expressway.
- 1978 - The entire Property was visible. Except for the small structures noted on the 1967 photo, the Property was vacant and undeveloped with most area appearing to have been cultivated. Scattered residential development was visible to the west of the Property.
- 1986 - The northern and westernmost parcels were not visible on the photo. The remainder of the Property appeared essentially unchanged from the earlier photos. The Cajalco Expressway was now visible.
- 1997 - All of the streets currently bordering or traversing the Property were visible. Otherwise, the Property was vacant and undeveloped. Most of the agricultural portions of the Property appeared to have been allowed to go fallow.
- 2002 - The Property appeared largely unchanged from the 1997 photo. The building at the corner of Martin Street and Harvill Avenue (not part of the Property) had been constructed.

Historical Use Summary

The Property was undeveloped agricultural land from at least 1953 through the present. No evidence of structures, other than scattered residences, was found on the Property. The streets traversing the Property appear to have been constructed between 1986 and 1997.

The existence of past agricultural activities on the Property and in adjacent areas indicates a potential for pesticide and/or heavy metal (associated with dusting powders) contamination. It has been the experience of SCS that it is not uncommon to find trace levels of pesticides in soils

at former agricultural areas in Southern California. However, these trace concentrations are rarely cause for environmental concern. It is our opinion that, without specific evidence of pesticide storage or mismanagement on the Property, collection and analysis of soil samples for pesticides is unwarranted.

REGULATORY RECORDS REVIEW

Local regulatory agencies and other sources were contacted in an effort to identify any known or suspected contamination sites or incidents of hazardous waste storage or disposal which might have resulted in soil or groundwater contamination within a one-mile radius of the Property. Within this unincorporated portion of Riverside County, the Riverside County Department of Environmental Health generally acts as the lead enforcement agency for underground storage tank compliance. If a tank has leaked and groundwater contamination is suspected, the Santa Ana Regional Water Quality Control Board (SARWQCB) generally becomes the lead agency in supervising contaminant characterization and cleanup.

Regulatory Database Sites

In addition, a database search for sites listed on various federal and state databases within one mile of the Property was obtained from EDR Environmental Information. A description of each of the databases searched is included in the report, which is attached as Appendix D. The EDR databases include NPL, US EPA CERCLIS, State CERCLIS, CORRACTS, LUST, CA SLIC, Calsites, SWLF, Cortese, Border Zone Properties, ERNS, and Toxic Pits. Any sites included on these lists within 0.25 miles of the Property are discussed in the following text. As a general rule, sites beyond 0.25 miles are not anticipated to impact a site significantly. Any sites beyond 0.25 miles with a high potential to impact the Property are also discussed. (Please note: the distances and directions listed in this report have been field verified and might not always match those in the EDR report.)

The EDR databases also include TSD facilities, hazardous waste generators, HAZNET, FINDS, SQGs, LQGs, USTs, HIST UST, RCRA violations, and TRIS facilities with toxic chemical releases (generally in accordance with permitting requirements - into the air, water, or land as reported under SARA Title III). These sites use or store hazardous materials and thus may pose a potential problem in the event of a spill or leak. However, unless these sites also appear in an agency list of contaminated sites, there is no evidence of any problems at this time. Therefore, sites on these lists will not be discussed unless on or in close proximity to the Property.

Please refer to Appendix D for further information on these sites.

Property Listings—

The map accompanying the database report shows three sites along Seaton Avenue south of Martin Street on the west side of the Property. Based on the addresses of two of these sites (18916 and 18966 Seaton), these sites would be on the Property. However, the map appears to be incorrect in its placement of these sites. They appear to actually be located along Seaton north

of Martin Street and are thus not on the Property. The site at 18916 Seaton (RLE Express) is characterized as a hazardous waste generator. This address is currently occupied by a towing service. The site at 18966 Seaton was a 1991 release of styrene monomer and subsequent fire. This release was remediated by the County Department of Environmental Health. Neither site is anticipated to impact the Property.

Other Database Sites—

The EDR database lists the following sites within a 1-mile radius of the Property. Some sites may be listed on more than one database.

Database	Number of Sites		
	0 – 1/4 miles	1/4 – 1/2 miles	1/2 - 1 mile
US EPA National Priority List (NPL)	1	0	0
US EPA RCRA Corrective Actions (CORRACTS)	0	0	0
California Superfund (SPL)	1	0	0
US EPA CERCLIS (sites under review for inclusion of the NPL)	1	0	0
California equivalent CERCLIS (SCL)	1	0	0
California Leaking Underground Storage Tanks (LUST)	0	2	0
California Solid Waste & Landfill Facilities (SWLF)	0	0	0
California Properties with Deed Restrictions	0	0	0
California Properties with Hazardous Waste (Cortese)	0	1	0
California Registered Underground Storage Tanks (UST)	0	0	0
California State Spills List	0	0	0
US EPA Hazardous Waste Generators	2	2	1

The only site of potential concern in the vicinity of the Property is March Air Force Base (AFB), a Federal and State Superfund site. March AFB is located to the north of the Property along both sides of the Escondido Expressway. The western half of the base (the portion immediately adjacent to the Property) has been redeveloped as the Riverside National Cemetery.

March AFB has been used for aircraft maintenance and repair, refueling operations, and training activities since 1918. In the early 1980's, 44 contaminated sites were identified on the base. Contaminants included fuels, chlorinated solvents, metals, PCBs, and other contaminants.

Groundwater investigations determined that groundwater beneath the base had also been impacted by some of these contaminants. In 1989, March AFB was added to the National Priorities List (NPL).

Most of the contamination is confined to the base, but the contaminated groundwater plume has been detected up to 0.25 miles east and south of the base and has caused at least two off-site wells to be closed. At the present time, the area of contamination lies to the east of the Escondido Expressway, approximately 0.5 miles from the nearest portion of the Property. Reportedly, a groundwater treatment system is in place that has halted the further migration of this plume off base. If this contaminated groundwater can be successfully treated, then it is unlikely that groundwater beneath the Property would be impacted. Even in the event of a future impact, the source has been identified and there is no information to indicate or suggest that any of the contaminants of concern were ever used or stored on the Property.

Areas of soil contamination were also identified on the portion of the base on the west side of the Escondido Expressway (to the north of the Property). All of these areas have reportedly been remediated and are unlikely to impact the Property.

Unmappable or Orphan Sites—

Nine unmappable sites were identified in the EDR Report according to their zip code. Unmappable sites cannot be plotted due to inaccurate or incomplete addresses. Based on review of the provided data, including the estimated locations of the unmappable sites in relation to the Property, it appears unlikely that the unmappable sites have adversely affected the environmental condition of the Property.

Oil and Gas Wells

Available oil and gas well maps from the California Department of Conservation, Division of Oil, Gas and Geothermal Resources (DOGGR) were reviewed to identify oil and gas wells on the Property or in the nearby area. According to DOGGR map No. W1-7 dated December 30, 2000, no oil exploration or production has been conducted within one mile of the Property.

FINDINGS AND OPINIONS

Based on the scope of work performed, SCS finds the following:

- The Property consists of 108 assessor's parcels located along the west side of the Escondido Expressway (I-215) and AT&SF Railroad between the Riverside National Cemetery and Cajalco Expressway. The combined area of the parcels (some of which are discontinuous) is approximately 250 acres.
- The Property is currently largely vacant and undeveloped and overgrown with natural vegetation. Most of the Property appears to have been either agricultural or recently (within the last six months) graded. Small amounts of trash and debris were observed on several of the parcels. No appreciable staining was noted on the soil in these areas. No

evidence of the past use, storage, manufacture, or disposal of hazardous substances was observed on the Property, with the possible exception of a machine shop at the southeast corner of Harvill and Old Oleander Avenues.

- The parcel occupied by the Perris Valley Machine Works is a potential concern as machine shops may use oils and solvents. The parcel did not appear to be paved. A more comprehensive inspection and possible site investigation is recommended for this parcel (314-040-027) whenever access can be secured.
- Several soil piles and small mounds were noted that appeared to be artificial. Soil types observed on these elevations appeared to be consistent with those observed elsewhere on the Property, suggesting that these mounds were created with soil from the Property, perhaps during the development of the various roads traversing the area. If the soils were brought in from off site, limited testing might be warranted to ensure that contaminated soil was not placed on the Property. However, as these soils are likely to be graded, spread across the Property, and incorporated into the native soils, any such contamination is likely to be de minimis.
- The Property was undeveloped agricultural land from at least 1953 through the present. No evidence of structures was found on the Property. The streets traversing the Property appear to have been constructed between 1986 and 1997.
- Regulatory database information identified few known and suspected contamination sites in the area surrounding the Property. It is unlikely that any of these sites have impacted the Property directly. However, the presence of the March AFB Superfund Site to the north and northeast continues to pose a threat to the groundwater beneath the Property, although based on the current status of the cleanup activities, the threat would appear to be minimal.

In summary, SCS has performed a Phase I Environmental Site Assessment of the Majestic Freeway Business Center (88-8 Bond Property) located in Perris, California, in general conformance with the scope and limitations of ASTM Practice E1527-00. This assessment has revealed no evidence of recognized environmental conditions in connection with the Property. With the exception of a follow-up inspection of the Perris Valley Machine Works parcel, no further investigations are recommended.

ADDRESS

PERRIS, CA 92570
PERRIS, CA 92570

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records within the requested search area for the following databases:

FEDERAL ASTM STANDARD

Proposed NPL..... Proposed National Priority List Sites
CERC-NFRAP..... CERCLIS No Further Remedial Action Planned

STATE ASTM STANDARD

AWP..... Annual Workplan Sites
CHMIRS..... California Hazardous Material Incident Report System
Notify 65..... Proposition 65 Records
Toxic Pits..... Toxic Pits Cleanup Act Sites
SWF/LF..... Solid Waste Information System
WMUDS/SWAT..... Waste Management Unit Database
CA BOND EXP. PLAN..... Bond Expenditure Plan
UST..... List of Underground Storage Tank Facilities
VCP..... Voluntary Cleanup Program Properties
INDIAN LUST..... Leaking Underground Storage Tanks on Indian Land
INDIAN UST..... Underground Storage Tanks on Indian Land
CA FID UST..... Facility Inventory Database
HIST UST..... Hazardous Substance Storage Container Database

FEDERAL ASTM SUPPLEMENTAL

CONSENT..... Superfund (CERCLA) Consent Decrees
Delisted NPL..... National Priority List Deletions
HMIRS..... Hazardous Materials Information Reporting System
MLTS..... Material Licensing Tracking System
MINES..... Mines Master Index File
NPL Liens..... Federal Superfund Liens
PADS..... PCB Activity Database System
ODL..... Open Dump Inventory
INDIAN RESERV..... Indian Reservations

EXECUTIVE SUMMARY

UMTRA.....	Uranium Mill Tailings Sites
RAATS.....	RCRA Administrative Action Tracking System
TRIS.....	Toxic Chemical Release Inventory System
TSCA.....	Toxic Substances Control Act
SSTS.....	Section 7 Tracking Systems
FTTS INSP.....	FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)

STATE OR LOCAL ASTM SUPPLEMENTAL

AST.....	Aboveground Petroleum Storage Tank Facilities
CLEANERS.....	Cleaner Facilities
CA WDS.....	Waste Discharge System
DEED.....	List of Deed Restrictions
REF.....	Unconfirmed Properties Referred to Another Agency
NFA.....	No Further Action Determination
NFE.....	Properties Needing Further Evaluation
SCH.....	School Property Evaluation Program
CA SLIC.....	Statewide SLIC Cases

BROWNFIELDS DATABASES

US BROWNFIELDS.....	A Listing of Brownfields Sites
VCP.....	Voluntary Cleanup Program Properties

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in *bold italics* are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL ASTM STANDARD

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 07/30/2004 has revealed that there is 1 NPL site within the searched area.

<u>Site</u>	<u>Address</u>	<u>Map ID</u>	<u>Page</u>

EXECUTIVE SUMMARY

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA).

CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 08/10/2004 has revealed that there is 1 CERCLIS site within the searched area.

<u>Site</u>	<u>Address</u>	<u>Map ID</u>	<u>Page</u>
MARCH AIR RESERVE BASE	452 SPTG CEV	0	3

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 06/15/2004 has revealed that there is 1 CORRACTS site within the searched area.

<u>Site</u>	<u>Address</u>	<u>Map ID</u>	<u>Page</u>
ALPHA OWENS CORNING L L C	19991 SEATON AVE	9	20

RCRIS: Resource Conservation and Recovery Information System. RCRIS includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs): generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs): generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs): generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDs treat, store, or dispose of the waste.

A review of the RCRIS-TSD list, as provided by EDR, and dated 08/10/2004 has revealed that there is 1 RCRIS-TSD site within the searched area.

CAL-SITES: Formerly known as ASPIS, this database contains both known and potential hazardous substance sites. The source is the California Department of Toxic Substance Control.

A review of the Cal-Sites list, as provided by EDR, has revealed that there is 1 Cal-Sites site within the searched area.

<u>Site</u>	<u>Address</u>	<u>Map ID</u>	<u>Page</u>
RIVERSIDE NATIONAL CEMETERY	7,123 ACRES; EAST OF RE	4	18

EXECUTIVE SUMMARY

CORTESE: This database identifies public drinking water wells with detectable levels of contamination, hazardous substance sites selected for remedial action, sites with known toxic material identified through the abandoned site assessment program, sites with USTs having a reportable release and all solid waste disposal facilities from which there is known migration. The source is the California Environmental Protection Agency/Office of Emergency Information.

A review of the Cortese list, as provided by EDR, has revealed that there is 1 Cortese site within the searched area.

<u>Site</u>	<u>Address</u>	<u>Map ID</u>	<u>Page</u>
EMPIRE TRACTOR	1480 NANDINA AVE	2	12

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.

A review of the LUST list, as provided by EDR, and dated 10/13/2004 has revealed that there are 3 LUST sites within the searched area.

<u>Site</u>	<u>Address</u>	<u>Map ID</u>	<u>Page</u>

PULLIAM FAMILY TRUST	1569 NANDINA AVE	3	16

FEDERAL ASTM SUPPLEMENTAL

RODS: Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid the cleanup.

A review of the ROD list, as provided by EDR, has revealed that there is 1 ROD site within the searched area.

<u>Site</u>	<u>Address</u>	<u>Map ID</u>	<u>Page</u>
MARCH AIR RESERVE BASE	452 SPTG CEV	0	3

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 09/09/2004 has revealed that there are 3

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency

A review of the HAZNET list, as provided by EDR, and dated 12/31/2002 has revealed that there are 3 HAZNET sites within the searched area.

Site Description: March Air Force Base originally a 640 acres site called Alessandro Aviation Field, was officially opened March 1, 1918. The base was initially used to train "Jenny" pilots during World War I. The base was closed for about four years after the war and was then reopened in 1927. By 1938, the base was considered to be the central location for west coast bombing and gunnery training. In 1949, the Strategic Air Command took control of the base. Since that time, the base has hosted bombers, refuelers, and cargo aircraft. In June 1992, the base became an Air Mobility Command installation. Its primary mission is refueling, but reserve and guard units have cargo and fighter missions as well. In September 1993, March AFB was designated by Congress to realign its forces. The Base will be redesignated "March Air Reserve Base" and is expected to decrease to about 1/3 of its present size. After realignment, property that is not retained by the base will be available for transfer. The U.S. Air Force, due to its primary mission in national defense, has long been engaged in a wide variety of operations that involve the use, storage, and disposal of hazardous waste. In 1980, the Installation Restoration Program (IRP) was developed by the Department of Defense (DOD) to locate and cleanup hazardous waste sites. At March AFB, aircraft maintenance, fuel storage operations, fire-training exercises, and base operations have generated a variety of hazardous wastes. Consequently, several areas of soil and groundwater on-base have been contaminated. In September 1983 the IRP process began. The results were records indicating 30 potentially contaminated sites which required further investigation. A second study, completed in March 1987, indicated that 5 of the 30 sites required even further investigation to determine the type and extent of contamination in the soil and groundwater. In June 1987, further investigation was done, indicating that additional work was required to better define the extent of contamination and to research possible off-base migration of TCE in groundwater. In November 1989, March AFB was added to the National Priorities List (NPL) primarily due to the contamination of groundwater on-base. In September 1990, a Federal Facilities Agreement (FFA) was signed by the Air Force, U.S. Environmental Protection Agency (EPA), and the State of California. Three separate OUs were created based on geographic location of sites, similarity of contaminants, and location of groundwater contaminant plumes. The subject of this ROD (6/20/96) is OU-1, OU-1 includes Sites 4,5,7,9,10,13,14,15,16,18,29,31,34, and 38. Groundwater at Sites 4, 18,31, and the OU-1 Groundwater Plume, and soil at Sites 4,10,15,18,31, and 34 require remedial action. Sites 5,7,9,13,14,6,29, and 38 are

1000169261

considered no further action. Sites 21 and 23 are covered in OU-2 ROD. Site 33, the Panero Aircraft Fueling System is detailed in OU-3. The following are Sites that require Groundwater remediation: OU 1-Groundwater Plume - The OU-1 Groundwater Plume is the most widespread plume at the base, extending from Site 31 south and east through the area of Sites 34, 9, and 5, and extending to a maximum of approximately 1300 feet beyond the eastern boundary and 1500 feet south of Site 5 off-base. Numerous contaminants, including TCE, were detected. Site 4 Groundwater Plume - This plume is localized in the vicinity of Site 4 with the apparent source area near the southern end of Site 4. The contaminants with the highest concentration are TCE and PCE. Site 18 - Groundwater Plume - This plume is localized in the vicinity of Site 18 with the apparent source area west of the engine test cell in the center of Site 18. Fuel has been detected in four of the ten monitoring wells to date. Site 31 - Groundwater Plume - Concentrations of contaminants at Site 31, primarily TCE, are much higher than those in the rest of the OU-1 Plume, and these high concentrations are confined to a relatively small area. These conditions coupled with the history of Site 31 (reported solvent disposal) indicate that Site 31 is a likely source for much of the TCE found in OU-1 groundwater. Therefore, even though the Site 31 plume has the same contaminants and is continuous with the OU-1 plume, it is appropriate to treat Site 31 separately from the remainder of the OU-1 plume, in order to eliminate the source of contamination. Sites That Require Soil Remediation Include: Site 4 - Landfill No.6 - a landfill operating from 1955 to 1969, covering 8.5 acres, and located along the eastern boundary of the base, south of the East Gate. The landfill is up to 25 feet deep, containing primarily sanitary waste, construction rubble, and debris. Small amounts of medical wastes and empty fuel containers are also present. There are low levels of chlorinated solvents in the soil and soil gas, as well as elevated concentrations of trichloroethylene (TCE) and tetrachloroethylene (PCE) in the groundwater. Both TCE and PCE are found in solvents used to clean and degrease military equipment. Vinyl chloride, a breakdown product of TCE and PCE, has also been detected in Site 4 groundwater. The landfill is considered the source of contaminants detected in groundwater downgradient of the Site. Site 10 - Flightline Drainage Channel - This site, installed prior to 1940, is located southeast of the flightline aircraft maintenance areas. The channel is concrete lined (since the 1960s) up to the eastern boundary of the base where it discharges to the Perris Valley Storm Drain (PVSD). The PVSD flows east approximately 2 miles, where it joins another drainage and flows south approximately 6 miles to the San Jacinto River. The channel has reportedly received various waste oils, hydraulic fluids, diesel fuel, jet fuel, waste paints, paint strippers, paint thinners, battery acids and solvents, including TCE. Prior to 1974, wastes may have been discharged directly to the PVSD. Since 1974, the main oil/water separator has pretreated the runoff before its discharge off-base. Site 15 - Fire Protection Training Area No.3- This site is located southeast of the end of runway 12-30 and between Sites 5 and 7. The area was developed in 1978 and was reportedly constructed by placing an underdrain system and gravel over a clay liner. Firefighting water, solutions of Aqueous Film Forming Foam (AFFF), and residual fuel used during training exercises were drained to a formerly unlined water holding pond located adjacent to Site 15. Approximately 6,000 gallons per year of contaminated JP-4 have been burned in training exercises since the facility was constructed in

MARCH AIR RESERVE BASE (Continued)

1978. This Site is no longer being used as a fire training area. Site 18 - Engine Test Cell - This site is located on the flightline, south of Taxiway No.2, and has been inactive for several years. The test cell was constructed in 1957 for the purpose of testing aircraft engines. An oil/water separator was installed in 1976, water from the separator was discharged to the base wastewater treatment plant. The oil was collected by a contractor for off-base disposal. Prior to 1976, spills of oil, fuel, and solvents were drained to a nearby ditch. Potential sources of fuel include overflow of tanker trucks and fuel tanks on aircraft that have been parked nearby. Site 31 - Unconfirmed Solvent Disposal - Site 31 is located off Graeber Street on the east side of Building 1211. The practice of discharging solvents on the ground reportedly occurred from about the mid-1950s to the mid-1970s. In addition, floor drains from maintenance shops may have leaked solvents to the subsurface. Groundwater sampling at the site has indicated TCE concentrations which exceed State and Federal drinking water standards. Site 34 - Pritchard Aircraft Fueling System - Site 34 is located next to Building 1245, at the southeast end of Taxiway No. 1. In 1962, six 50,000 gallon tanks were moved to this site from the Pabero Fueling System. In 1990, this system was discontinued, and in 1991, the tanks and system were removed. During a geological investigation stained soils and fuel odors were observed. Sites With No Further Action Planned: Site 5 - Landfill No.3 - This Site covers approximately 5 acres and is located southeast of the present flightline. The landfill was reportedly operated from the late 1940s to approximately 1960. Landfill wastes consist primarily of sanitary waste and construction rubble. Site 7 - Fire Training Area No.2 - This Site is located on the eastern part of the base, north of the Alert Facility. Between 1954 and 1978, fire training exercises were conducted in unlined training pits. Three distinct burn pits were identified in historic aerial photographs of the base. A portion of this Site may have been used for crash rescue training. Wastes used in those exercises reportedly included contaminated fuel, waste solids, and spent solvents. Site 9 - Main Oil/Water Separator - Site 9 is located north of the Site 5 at the southeast end of the flightline apron. The facility was constructed in 1974 and serves the main storm, drainage system for the flightline apron and the flightline shops. The storm drains have reportedly received waste oils, hydraulic fluids, diesel fuel, waste paints, spent solvents, paint strippers, paint thinners, and battery acids. The oil/water separator is of earthen construction with a large baffle that divides the separator into two compartments. The separated oil is picked up by a skimmer and pumped to a holding tank for Off-base disposal. This facility drains into the flightline Drainage Channel (Site 10) and then to the Perris Valley Storm Drain Lateral A. Site 13 - Tank Truck Spill Site - Site 13 is located along the eastern perimeter road of the base, within the northern portion of Site 5. In 1973, approximately 5,000 gallons of JP-4 jet fuel spilled from a tank truck to the ground at this location. The accidental discharge resulted from a mechanical malfunction. There was no reported containment or cleanup activities. Site 14 - Liquid Fuel Pump Station Overflow - Site 14 is located southeast of the flightline apron and about 50 to 100 feet west of the East March Sludge Drying Beds (Site 16). In 1973, approximately 1,000 gallons of JP-4 jet fuel spilled onto the ground. The spill occurred due to an overflow of the liquid fuel pump station at Building 1245. The spill

EDR ID Number

Database(s) EPA ID Number

MARCH AIR RESERVE BASE (Continued)

1000169261

was contained in the unpaved area south of the pump station and allowed to percolate into the ground. Site 16 - East March Sludge Drying Beds - Site 16 is located on the eastern part of the base, at the south end of the flight line parking apron, and near the former East March Wastewater Treatment Plant. The treatment plant was constructed in 1938 and provided secondary treatment for sanitary and industrial wastewater. Primary and secondary sludges were digested anaerobically, dewatered on unlined sludge drying beds, and disposed of in an on-base landfill. The sludge may have contained heavy metals and organics resulting from discharges of industrial wastes to the sanitary sewer system. These drying beds operated from 1938 to 1977, when the plant was destroyed in place. Site 29 - Fire Training Area No.1 - Site 29 is located at the eastern part of the base, north of Site 9. The area was used as a fire training pit prior to 1951. Suspected contaminants at the site include contaminated fuel, waste oil, and spent solvents. Site 38 (PCB Contamination, Building 1311), Building 1311 is located at the southeast end of the taxiway, northwest of IRP Site 23. In 1984, soils from four areas contaminated with transformer oils were sampled. Soils from two of the areas (Buildings 317 and 1305) were determined to be PCB-contaminated. The soils were excavated and removed from the Base. Records to verify the cleanup have not been located. The RI/FS report and Proposed Plan for OU-1 were released to the public on April 28, 1994. These two documents were made available via the Administrative Record, the information repositories at the Moreno Valley and March AFB libraries, and at the Moreno Valley Chamber of Commerce. A fact sheet, condensed from the Proposed Plan, was sent to everyone on the March AFB mailing list, which includes Restoration Advisory Board (RAB) members. An OU-1 RI/FS subcommittee, formed by the RAB, provided oral comments to the RAB at its April 26, 1994 meeting. The Final RI/FS Report was published in July 1994. A public comment period was held from April 28 to May 28, 1994. In addition, a public meeting was held on May 12, 1994 at 7 p.m. at Best Western Image Suites in Moreno Valley. Representatives of the U.S. Air Force, EPA, Department of Toxic Substances Control, and California Regional Water Quality Control Board, Santa Ana, attended the public meeting to address any questions about the RI/FS and Proposed Plan. March Air Force Base (AFB) is located on 7,123 Acres in the northern end of the Perris Valley, east of the city of Riverside, in Riverside County, California, approximately 60 miles east of Los Angeles and 90 miles north of San Diego. The base lies in sections of Township 3 South, Range 4 West. The population of Riverside County is 1,700,413 and consists primarily of English and Spanish speaking citizens. The climate of the March AFB area is characterized as Mediterranean to semi-arid, varying according to elevation and distance from the Pacific Ocean. The weather generally consists of warm to hot, dry summers and mild winters. Current land use on March AFB is classified as residential and light industrial. Maintenance facilities, warehouses, and administrative centers support the mission. The land surrounding March AFB area includes areas of residences in all directions around the Site, light industry to the north, and agriculture to the east and south. With the exception of small surface water ponds that are used for agricultural purposes, there are two permanent surface water bodies within 3.5 miles of March AFB. Lake Perris, located 4 miles southeast of the base, provides approximately 130,000 acre feet of storage for State Project Water.

brought in by the California Aqueduct which runs north and east of the base. An east-west portion of the Colorado River Aqueduct is located approximately 3.5 miles south of the base. This aqueduct flows in to Lake Matthews, which is located about 10 miles west of March AFB. A very small recreation lake is located approximately 2 miles east of the base. It is maintained by the Moreno Valley Ranch homeowners association and is located just south of Iris Street and west of Lasselle Street in the City of Moreno Valley. A number of wetlands and riparian areas have been identified on and in the immediate area of the base, most are located on West March, outside OU-1. The U.S. Army Corps of Engineers determined that approximately 2.17 acres of jurisdictional wetlands exist in the Heacock Drain Channel, with .8 acres of wetlands adjacent to the Site 4 landfill. The wetlands are not continuous but are localized patches of wetland vegetation that change position each year due to high volume, high velocity storm water flow from the spring rains through these channels which causes scouring of the earthen bottom and sides. Many industrial, agricultural and domestic wells exist in the Perris Valley. Four on-base wells and two off-site wells southeast of the base were formerly used for the base water supply. One of these wells was shut down in February 1984 due to trichloroethylene (TCE) contamination, the other 3 on-base wells were shut down due to low yields. The two off-site wells are located southeast of the base in the center of Perris Valley. Although both of these wells are operable only one is occasionally used for emergency service, while the other is dormant. All base water is currently supplied by the Eastern Municipal Water District. OU-1 is made up of Sites 4,5,7,9,10,13,14,15,16,18,29,31,34, and 38. Sites 21 and 23 are included in the OU-2 ROD. Sites that require soil remediation include Sites 4, 10, 15, 18, 31, 34. Sites that require groundwater remediation include OU1 and Sites 4,18, and 31 groundwater plumes. Sites with No Further Action Planned: Site 5,7,9,13,14,16,29,38. MARCH AFM NR RIVERSIDE, CA. MULTIPLE ON-BASE SITES OF TCE CONTAM. WELL ON BASE SHUT DOWN IN 1984, CONTAM TCE. TCE NOW IN WELLS OFF BASE. PVT WELLS SHUT DOWN.

 Final Date: 11/21/1989

**NPL SUMMARY:
 Summary :**

Conditions at proposal July 14, 1989): March Air Force Base (MAFB) covers approximately 7,000 acres near Riverside in the Moreno Valley in Riverside County, California. MAFB is adjacent to light industrial, agricultural, and residential areas. Established in 1918 as the Alessandro Aviation Field, MAFB has served as a training base and refueling operations base. Industrial operations including aircraft maintenance and repair) involved use of solvents and disposal of solvent wastes. MAFB is participating in the Installation Restoration Program (IRP), established in 1978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from hazardous materials. As part of IRP, the Air Force investigated 28 potentially contaminated disposal areas. MAFB Well No. 1 on base was found to be contaminated with trichloroethylene, tetrachloroethylene, and cis 1,2 dichloroethylene at levels that exceed State drinking water standards. It was taken out of service. Soils on the base are contaminated with toluene and benzene. An estimated 11,600 people obtain drinking water from municipal wells within 3 miles of hazardous substances on MAFB. The Air Force is conducting a remedial investigation/feasibility study (RI/FS) to determine the type and extent of contamination at the base and identify alternatives for remedial action. Status November 21, 1989): Field work continues on the RI/FS.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Elapsed ASTM days: Provides confirmation that this EDR report meets or exceeds the 90-day updating requirement of the ASTM standard.

FEDERAL ASTM STANDARD RECORDS

NPL: National Priority List

Source: EPA

Telephone: N/A

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 07/30/04

Date Made Active at EDR: 09/09/04

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

Source: EPA

Telephone: 703-413-0223

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 08/10/04

Date Made Active at EDR: 10/27/04

Database Release Frequency: Quarterly

Date of Data Arrival at EDR: 09/21/04

Elapsed ASTM days: 36

Date of Last EDR Contact: 09/21/04

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Source: EPA

Telephone: 703-413-0223

As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

RCRIS: Resource Conservation and Recovery Information System

Source: EPA
Telephone: 800-424-9346

Resource Conservation and Recovery Information System. RCRIS includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs): generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs): generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs): generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Next Scheduled EDR Contact: 11/08/04

UMTRA: Uranium Mill Tailings Sites

Source: Department of Energy
Telephone: 505-845-0011

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized. In 1978, 24 inactive uranium mill tailings sites in Oregon, Idaho, Wyoming, Utah, Colorado, New Mexico, Texas, North Dakota, South Dakota, Pennsylvania, and on Navajo and Hopi tribal lands, were targeted for cleanup by the Department of Energy.

SCH: School Property Evaluation Program

Source: Department of Toxic Substances Control
Telephone: 916-323-3400

This category contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. In some cases, these properties may be listed in the CalSites category depending on the level of threat to public health and safety or the environment they pose.

Date of Government Version: 10/05/04
Database Release Frequency: Quarterly

Date of Last EDR Contact: 09/16/04
Date of Next Scheduled EDR Contact: 11/29/04

NFE: Properties Needing Further Evaluation

Source: Department of Toxic Substances Control
Telephone: 916-323-3400

This category contains properties that are suspected of being contaminated. These are unconfirmed contaminated properties that need to be assessed using the PEA process. PEA in Progress indicates properties where DTSC is currently conducting a PEA. PEA Required indicates properties where DTSC has determined a PEA is required, but not currently underway.

HAZNET: Facility and Manifest Data

Source: California Environmental Protection Agency
Telephone: 916-255-1136

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

US BROWNFIELDS: A Listing of Brownfields Sites

Source: Environmental Protection Agency

Telephone: 202-566-2777

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become BCRLF cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Date of Next Scheduled EDR Contact: N/A

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities

Source: Department of Social Services

Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 from the U.S. Fish and Wildlife Service.

APPENDIX E
RESUMES OF PROJECT PERSONNEL

J. RODNEY MARSH

Education

B.S. - California State University at Long Beach, 1971
Chemistry

M.S. - Illinois Institute of Technology, 1974
Environmental Engineering

Affiliations

American Chemical Society

Professional Registrations

Registered Environmental Assessor - California (No. 328)
Environmental Manager - Nevada (No. EM-1121)

Professional Experience

Mr. Marsh is experienced in the chemical characteristics and environmental behavior of a variety of industrial and hazardous wastes and wastewaters. He is very familiar with current waste control regulations under CERCLA, RCRA, TOSCA, the Clean Water Act, the Clean Air Act, and corresponding State codes. He is an instructor for SCS's in-house health and safety training program, and also teaches a graduate-level waste management course at California State University, Long Beach.

Mr. Marsh currently manages all of the SCS-Long Beach Phase I Environmental Assessment projects. He has completed or managed several hundred such assessments. He prepared the in-house guidance manual for the preparation of Phase I reports, and has given several seminars and authored several articles on Phase I assessments.

Mr. Marsh has provided extensive research support for litigation and expert testimony efforts. Specific projects have included assessments of historical industrial waste management practices, evaluations of the environmental fate and transport of chlorinated solvents, and estimation of waste quantities and characteristics. Sites have ranged from small industrial facilities to major state and federal Superfund sites.

Mr. Marsh served as Senior Project Engineer on a remediation project involving a pesticide-contaminated former air strip in the Litchfield Park, Arizona, area. His responsibilities included design of sampling programs, data analysis to determine the extent of contamination, remediation cost estimating, and preparation of the Remedial Investigation report.

Mr. Marsh served in a similar capacity on a former petroleum refinery remediation project in Southern California. As Technical Advisor, he assisted in the sampling data evaluation and estimations of contamination extent. He also provided fate and transport data for the contaminants found at the site for the Remedial Investigation report. In addition, he prepared a

J. RODNEY MARSH (continued)

preliminary risk assessment for the site, and assisted in the data compilation and interpretation for the formal risk assessment.

For remediation at a former steel mill in Fontana, California, Mr. Marsh prepared a preliminary feasibility assessment and assisted in the review of bids and selection of prospective remediation contractors. Site contaminants included coal tar, steel slag, various heavy metal compounds, and volatile organic compounds.

Mr. Marsh served as Project Engineer for the preparation of an Environmental Impact Statement for a proposed hazardous waste treatment facility in Arizona. His responsibilities included developing estimates of the types and quantities of wastes anticipated, determining the most efficient and cost-effective combination of treatment and disposal alternatives for these wastes, and preparing a conceptual design for the facility.

Mr. Marsh was Project Manager on the preparation of three city and county hazardous waste management plans. The first, for Yolo County, California, was prepared in response to state legislation and addressed every phase of hazardous waste generation, treatment, storage, disposal, control, education, and regulation in the County. The other two were local hazardous waste management plans prepared for the Cities of El Segundo and Glendora. These plans identified areas where the Cities' hazardous waste management goals differed from those of Los Angeles County.

Mr. Marsh was Project Manager on a study for the Nevada Department of Transportation to identify and inventory hazardous wastes generated by highway maintenance stations throughout the state. The study involved an assessment of degree of compliance with RCRA regulations and recommendations for improving compliance.

Mr. Marsh also managed three hazardous waste audit studies for the California Department of Health Services. These studies focused on automotive paint and body shops, marine yards, and precious metals industries and sought to identify hazardous wastes generated and techniques for minimizing, treating, or disposing of the wastes.

Mr. Marsh was Project Manager on two studies regarding small-quantity generator hazardous wastes in the North Hollywood, California, area for the Southern California Association of Governments. Both studies involved detailed surveys and inventories. The first concluded with a review of existing hazardous materials and waste management practices and recommendations for better management. The second involved an evaluation of regional treatment, storage, and disposal options, and the conceptual design of a collection system and hazardous waste transfer station.

Mr. Marsh has served as both Project Manager and field team member on two Naval Assessment and Control of Installation Pollutants Program Initial Assessment Studies, the Navy's version of the DOD Installation Restoration Program. These studies involved comprehensive evaluations of current and past hazardous waste generation, management, and disposal practices on military facilities. Information was gathered via records searches, interviews, and site investigations.

J. RODNEY MARSH (continued)

Mr. Marsh was also the Project Manager and a field team member for several projects conducted for the California General Services Administration to identify and inventory PCB-containing electrical equipment at state-owned facilities, including state parks, correctional facilities, highway department stations, National Guard facilities, etc.

Mr. Marsh served as Senior Project Engineer on several Air Force studies to inventory hazardous wastes for Vandenberg Air Force Base. These projects involved all host base and tenant activities, including launch and between-launch activities associated with the space shuttle, and Titan and Atlas launch facilities. The project team evaluated all of these operations and the chemicals and materials involved in them, and produced an expected inventory of wastes which included type of waste, chemical constituents, normal expected quantities, and "worst case" quantities.

Mr. Marsh completed an inventory of the contents of a hazardous waste/oily waste landfill to determine if its operations were in strict accordance with federal and state regulations. This study involved a detailed analysis of hauler records to determine what wastes had been accepted by the landfill, and how they had been treated or disposed. Of particular concern was whether incompatible or unusually dangerous wastes had been buried in close proximity or in such a way as to endanger continued operations at the site.

Mr. Marsh's other projects related to hazardous waste management include:

- Facility hazardous materials and waste compliance assessment audits.
- Evaluation of alternatives for treating and disposing of dilute pesticide solutions at applicator air fields (for EPA).
- Determine the relative health effects of wastewater treatment processes based on literature citations (for EPA).
- Performance review of Class I disposal sites in California, including assessment of the operating history and reported emissions at all active and some now-closed sites (for State of California).
- Feasibility studies for remediation of sites contaminated with pesticides, dioxins, and coal tar.

Professional Experience

Mr. Dong provides SCS with 24 years of technical and practical experience in environmental engineering, environmental chemistry, hazardous waste characterization and management, and project management. As Environmental Services Director in SCS's Long Beach office, Mr. Dong oversees projects related to hazardous waste assessment and remediation. In addition, he has considerable technical environmental auditing and permitting experience, including:

- Auditing of hazardous material handling operations and/or facilities.
- Environmental compliance auditing of specific industries such as automotive paint, marine boat repair, jewelry manufacturing, etc.
- Environmental compliance auditing of statewide maintenance facilities for Nevada Department of Transportation.
- NPDES permitting for groundwater treatment, on-site dewatering operations, and stormwater (40 CFR122-124).
- AQMD permits for vapor extraction systems utilizing catalytic and/or thermal oxidation.

Some of the recent projects Mr. Dong has participated in or managed include:

- Project Manager for hydrogeologic/geologic assessment of gasoline contamination in groundwater in Torrance, California. Responsible for development of workplan, site health and safety plan, and interfacing with L.A. County Health, DOHS, RWQCB. Twenty-five groundwater monitoring wells have been installed in an attempt to define groundwater gradient and water quality in the area.

THOMAS DONG, R.E.A. (continued)

- Directed sampling and analysis of point source wastewater discharges from major industrial facility located in Southern California. Environmental audit of operations was conducted prior to implementation of sampling/analysis program. Project results were incorporated into a baseline monitoring report for review by EPA.
- Responsible for developing a site investigation workplan, site remediation workplan, and site cleanup plan for plating site contaminated with heavy metals above Title 22 maximum levels for soils. Interfacing with regulatory agencies, site cleanup personnel, hazardous waste haulers, and drillers was required for the project.
- Project Director for hazardous waste engineering services for the City of Los Angeles Community Redevelopment Agency. This project involves interfacing with developers, remediation contractors, regulatory agencies, and community agencies for redevelopment of property in the downtown area of Los Angeles.
- Project Director for Well Installation Program (WIP) projects administered by the Water Quality Control Board, Los Angeles Region. These projects involve audits of hazardous material storage, use, and generation at facilities located within the federal Superfund groundwater contamination areas of the San Gabriel and San Fernando Valleys. Preparation of WIP workplans and investigation of sites for potential sources of groundwater contamination are required under WIP.
- Expert witness for various projects involving litigation with major oil company, paint formulator, real estate developer, major construction company, and municipalities.

Furthermore, Mr. Dong is well versed in laboratory procedures and instrumental analysis. He is very familiar with protocols involved in sample collection, preservation, storage, transport, chain-of-custody documentation, and QA/QC procedures that are necessary both in the field and laboratory. Mr. Dong's technical experience and project management skills have resulted in providing high quality services to SCS clients within proposed schedules and budget.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 04/27/2022 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

Lists of Federal RCRA generators

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 02/28/2022 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/24/2022 has revealed that there is 1 ENVIROSTOR site within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Hazardous waste / Contaminated Sites

CERS HAZ WASTE: List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, and RCRA LQ HW Generator programs.

A review of the CERS HAZ WASTE list, as provided by EDR, and dated 01/18/2022 has revealed that there are 2 CERS HAZ WASTE sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 02/28/2022 has revealed that there are 4 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

Summary Details:

Conditions at proposal July 14, 1989): March Air Force Base (MAFB) covers approximately 7,000 acres near Riverside in the Moreno Valley in Riverside County, California. MAFB is adjacent to light industrial, agricultural, and residential areas. Established in 1918 as the Alessandro Aviation Field, MAFB has served as a training base and refueling operations base. Industrial operations including aircraft maintenance and repair) involved use of solvents and disposal of solvent wastes. MAFB is participating in the Installation Restoration Program (IRP), established in 1978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from hazardous materials. As part of IRP, the Air Force investigated 28 potentially contaminated disposal areas. MAFB Well No. 1 on-base was found to be contaminated with trichloroethylene, tetrachloroethylene, and cis-1,2-dichloroethylene at levels that exceed State drinking water standards. It was taken out of service. Soils on the base are contaminated with toluene and benzene. An estimated 11,600 people obtain drinking water from municipal wells within 3 miles of hazardous substances on MAFB. The Air Force is conducting a remedial investigation/ feasibility study (RI/FS) to determine the type and extent of contamination at the base and identify alternatives for remedial action. Status November 21, 1989): Field work continues on the RI/FS.

CERS Description: Chemical Storage Facilities

Violations:

Site ID: 425098
Site Name: Painted Rhino
Violation Date: 07-31-2018
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)

Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.

Violation Notes: Returned to compliance on 08/14/2018. OBSERVATION: The most recent business plan submission in the statewide information management system (CERS) failed to contain a chemical inventory description page for Propane. CORRECTIVE ACTION: Owner/operator shall complete a chemical inventory page for all reportable hazardous materials on site and submit to the statewide information management system at <http://cers.calepa.ca.gov>.

Violation Division: Riverside County Department of Env Health
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 425098
Site Name: Painted Rhino
Violation Date: 07-31-2018
Citation: 40 CFR 1 265.33 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.33

Violation Description: Failure to test and maintain as necessary all facility communications or alarm systems, fire protection equipment, spill control equipment, and decontamination equipment to assure its proper operation in time of emergency.

Violation Notes: Returned to compliance on 08/07/2018. OBSERVATION: Observed fire extinguishers not properly maintained. Observed fire extinguisher that need to be serviced and postings for two fire extinguisher but a fire extinguisher was not available. CORRECTIVE ACTION: Owner/operator shall properly test and maintain all emergency equipment. Fire extinguishers need to be serviced annually and where a fire extinguisher sign is posted, a fire extinguisher should be available.

Violation Division: Riverside County Department of Env Health
Violation Program: HW
Violation Source: CERS,

Site ID: 425098
Site Name: Painted Rhino
Violation Date: 07-31-2018
Citation: Un-Specified
Violation Description: Business Plan Program - Operations/Maintenance - General Local Ordinance

Violation Notes: Returned to compliance on 08/07/2018. OBSERVATION: Observed the propane rack without a label of the contents or an proper NFPA 704 sign. CORRECTIVE ACTION: Owner/operator shall properly identify all hazardous materials storage areas appropriately. Propane rack shall have a label that identifies the storage of Propane and the correct NFPA sign. Submit photos to this department.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 04/27/2022	Source: EPA
Date Data Arrived at EDR: 05/05/2022	Telephone: N/A
Date Made Active in Reports: 05/31/2022	Last EDR Contact: 06/01/2022
Number of Days to Update: 26	Next Scheduled EDR Contact: 07/11/2022
	Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/27/2022	Source: EPA
Date Data Arrived at EDR: 05/05/2022	Telephone: N/A
Date Made Active in Reports: 05/31/2022	Last EDR Contact: 06/01/2022
Number of Days to Update: 26	Next Scheduled EDR Contact: 07/11/2022
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/27/2022

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

CERS: CalEPA Regulated Site Portal Data

The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 12/03/2021	Source: Department of Energy & Environmental Protection
Date Data Arrived at EDR: 02/11/2022	Telephone: 860-424-3375

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

BUILDINGS 14A & 14B
PERRIS, CA 92570

TARGET PROPERTY COORDINATES

Latitude (North): 33.849427 - 33° 50' 57.94"
Longitude (West): 117.259401 - 117° 15' 33.84"
Universal Transverse Mercator: Zone 11
UTM X (Meters): 476002.1
UTM Y (Meters): 3745297.2
Elevation: 1528 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map: 12015925 STEELE PEAK, CA
Version Date: 2018

Southeast Map: 12015907 PERRIS, CA
Version Date: 2018

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ENE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
06065C1410G	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
06065C1430H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
NOT AVAILABLE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: ARLINGTON

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	11 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.3 Min: 6.6
2	11 inches	50 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.3 Min: 6.6
3	50 inches	59 inches	cemented	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.3 Min: 6.6

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program

State Water Resources Control Board

Telephone: 916-341-5577

The GAMA Program is California's comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Health Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations

Appendix F
Resumes of Project Personnel

ALLISON O'NEAL

Education

BS – Geology, Humboldt State University, Arcata, 2018

Specialty Certifications

40-Hour OSHA EPA-Approved Hazardous Waste Operations & Emergency Response (HAZWOPER) Training

Professional Affiliation

San Diego Association of Geologists – Member

Professional Experience

Ms. O'Neal is an environmental professional with specialized experience in site assessment, subsurface investigation, and due diligence reporting. She is responsible for performing site reconnaissance, reviewing regulatory agency records and historical documents, interpreting evidence related to historical land use, monitoring soil management, collecting data (soil, groundwater, soil vapor sampling, etc.), and generating maps for soil boring/well logs, groundwater gradients, and hydrocarbon iso-concentrations. She also oversees drilling and groundwater monitoring well installations, writes reports for Phase I and II Environmental Site Assessments (ESAs), and ensures that groundwater monitoring reports meet regulatory agency standards.

Her project experience is summarized below.

Mission Village Shopping Center, Former Dry Cleaning Facility, San Diego, CA. Ms. O'Neal conducted soil and groundwater assessments to determine the attenuation of a plume of constituents of concern while meeting requirements of the Department of Environmental Health. She oversaw six well installations that included properly documenting well log data. She also assisted with the technical writing of the Subsurface Assessment Report, and created groundwater gradient and constituents of concern iso-concentration maps.

Villa de Vida Project, Special Needs Residential Community, Phase I and II ESA, San Diego, CA. Ms. O'Neal performed a Phase I ESA on the property and analyzed the status of potential Recognized Environmental Concerns (RECs), such as a release from on-site underground storage tanks (USTs) (the tanks were used when the site was a Public Works Road Station). The Phase I ESA recommended a subsurface site assessment because of the close proximity to the former USTs. During the Phase II investigation, soil samples detected elevated concentrations of petroleum hydrocarbons. Ms. O'Neal oversaw excavation of the contaminated soil and collected soil confirmation samples at the edges of the excavation.

Former Country Hills Dry Cleaners, In Situ Chemical Reduction Feasibility Study, Diamond Bar, CA. Ms. O'Neal oversaw drilling and direct push injection of the appropriate amendments to remediate constituents of concern associated with a former dry cleaner at the site. She created

boring logs, collected waste characterization samples, and helped manage site safety. In addition, she assisted in obtaining the regulatory permits required for the site from the City of Diamond Bar.

Community HousingWorks San Marcos, Affordable Housing Development, Phase I and II ESAs, San Marcos, CA. Ms. O'Neal performed a Phase I ESA on the property and analyzed the status of RECs, such as a release from a dry cleaning facility adjacent to the site. After completing the Phase I ESA, SCS recommended a subsurface assessment regarding a historically documented release of constituents of concern. During the Phase II investigation, Ms. O'Neal organized the utility mark-out, mapped boring locations, and oversaw the installation and retrieval of soil vapor samples that were collected. She wrote technical reports for both phases of the environmental investigation.

Clairemont Village Shopping Center, Phase I ESA, San Diego, CA. Ms. O'Neal completed a Phase I ESA investigation that included extensive historical research on several automotive repair facilities adjacent to the site, and historic releases from a former gas station and dry cleaning facility also on site. In addition, the client required asbestos, radon, lead-based paint, and mold inspections at the property, using their specific guidance. After completing the Phase I ESA, SCS recommended additional soil vapor sampling in the areas of the former dry cleaner and gas station.

J. JUSTIN RAUZON, REPA

Education

MEM – Environmental Management, Duke University, 2014

BS – Zoology (Double Emphasis: Human and Marine Biology), Brigham Young University, 2004

Justin Rauzon, REPA

Professional Experience

Mr. Rauzon has more than 16 years of environmental services experience, all with SCS. Fluent in Spanish, Mr. Rauzon is an SCS Project Manager with a diverse background in biological and environmental sciences, and regularly performs environmental assessments and compliance audits at sites in the U.S. and in Latin America. He has technical and management experience with soil, soil vapor, and groundwater investigations at industrial, commercial, landfill, greenfield, and residential properties. He has extensive experience with environmental laws and regulations in both the U.S. and Mexico. His work experience includes all project phases, from development of cost estimates for various site assessment and cleanup programs to implementing remediation programs and interfacing with regulatory agencies. His experience with and understanding of these issues led to his appointment as a National Partner in Environmental Due Diligence in 2021.

Selected projects in which he has participated are described below.

Environmental Management

Due Diligence Assessments of Properties Prior to Real Estate Transfer of Properties in California, Arizona, New Jersey, Mexico, Puerto Rico, and the Dominican Republic. Mr. Rauzon has completed numerous due diligence assessments of properties prior to acquisition, disposition, or loan financing by investment banks, insurance companies, corporations, non-profit entities, real

estate developers, and private parties. Projects have included Phase I assessments that meet federal All Appropriate Investigation (AAI) regulations, American Society for Testing and Materials (ASTM) standards, and client-specific guidelines; inspections for asbestos and lead-based paint; Phase II investigations; preparation of abatement and remediation cost estimates; and regulatory agency coordination. These projects frequently involve review of previous environmental reports and investigation of current and past on-site operations, regulatory agency records searches, evaluation of historical property use information, identification of nearby potentially contaminated sites, and development of appropriate conclusions about environmental risks. Investigations involve preparation of work plans, soil boring and subsequent sampling, groundwater well installation and sampling, soil gas probe installation and sampling, precision mapping, evaluation of contaminants in accordance with regulatory requirements or generally accepted guidelines, preparation of investigation report, and analysis of applicable remedial alternatives. Mr. Rauzon has served as the Project Manager for sites that have received regulatory closure from various regulatory agencies.

Planning, Coordinating, and Supervising Remedial Actions That Included Excavation, Transport, and Disposal of Contaminated Soils and Water. Investigations involve preparation of Remedial Action Plans (RAPs), direction of fieldwork, oversight of confirmatory sampling, and interfacing with regulatory agencies.

Groundwater Monitoring and Reporting for Simi Valley Landfill and Recycling Center, Simi Valley, CA. Mr. Rauzon is a key team member for the sampling and monitoring of 10 groundwater wells and 5 leachate locations to evaluate potential releases from waste units affecting groundwater at Simi Valley Landfill. He also prepares the annual leachate control system's effectiveness reports and documents results of resampling of groundwater wells based on initial statistical indications of a release.

The Characterization of Hazardous Waste Materials. These projects include collection of soil and/or liquid samples to profile the waste materials, interpretation of laboratory results, and evaluation of disposal/recycling options to minimize the costs and liabilities to clients associated with the removal of wastes.

Assessment and Certification of Hazardous Waste Tank Systems. These investigations involve working with a Professional Engineer to complete field inspections of hazardous waste tanks, associated ancillary equipment, leak-detection systems, and secondary containment devices, as well as interfacing with regulatory agencies.

Project Management

Project Manager for Environmental Due Diligence Assessment and Health and Safety Program Review of Six Geothermal Power Plants Located in California, Nevada, New Mexico, and Utah.

SCS services included time-sensitive field inspection, environmental document and permit review, and preparation of environmental risk evaluation reports. Mr. Rauzon reviewed and assessed plant health and safety plans and procedures; facility response plans; incident reports; and arrangements for plant selection, appointment, and management of support contractors. SCS provided support consulting services in the successful client plant acquisition and integration support.

Project Manager for Due Diligence Investigations at Dry Mill and Biofuel Distillery Plant, Madera, CA. SCS services included Phase I environmental assessment and Phase II soil, soil vapor, and groundwater investigation to support client's acquisition of an ethanol production plant at which a lumber mill was historically located. SCS provided additional consulting services related to remediation cost analysis and management of ongoing environmental issues.

Project Manager for Due Diligence Investigation of a Portfolio With More Than 300 Industrial Sites Throughout Mexico. SCS services included conducting Phase I and Phase II environmental assessments within the strict timeline of the \$1.2 billion industrial real estate transaction. Subsequent to the closing of the deal, SCS provided ongoing consulting services to facilitate integration and management of various facilities with ongoing environmental issues.

Project Manager for Hazardous Materials Consulting Services in Support of the State Route 91 Corridor Improvement Project in Orange and Riverside Counties, CA. SCS services included sampling and inventory of potentially hazardous materials associated with more than 25 bridges along the SR-91 and I-15 freeways; environmental assessments on properties within the proposed freeway expansion area; and soil testing for herbicides, pesticides, and fungicides on several land parcels.

Project Manager for Investigation and Remediation of Industrial Facility Located in Fontana, CA. SCS conducted a series of environmental assessments, investigations, and remedial activities that provided sufficient information to identify environmental issues and business risks, and facilitate the client's successful purchase of property. A number of recognized environmental conditions, including releases of coal tar, solvents, heavy metals, and total petroleum hydrocarbons, were identified. Project activities conducted during the acquisition and redevelopment of the property included shallow and deep soil and soil vapor investigations; installation of groundwater monitoring wells and subsequent groundwater sampling; subsequent remedial excavation under San Bernardino County Fire Department (SBCFD) oversight to obtain closure; and excavation and off-site disposition of contaminated soil.

Health and Safety

Mr. Rauzon has participated in a certified health and safety program in compliance with OSHA Standard 29 CFR 1910.120. He is knowledgeable in incident response operations, team functions, personnel safety, and field equipment. He is able to recognize and evaluate potential chemical and physical hazards and associated risks in field operations; discuss and use personal protective equipment (PPE), such as respiratory protection and protective clothing; use and interpret direct-reading instruments; and examine and establish Standard Operating Safety Guidelines to ensure safe and effective response operations.
