# RE: Review of Paradise Valley (Specific Plan No. 00339) Fiscal Impact Analysis, dated February 15, 2017

Michael Baker International has performed a review of the Fiscal Impact Analysis (FIA) prepared for the Paradise Valley land development project (Project). The Project proposes to develop up to 8,500 housing units and 1.4 million square feet of non-residential construction (including 400 business and resort hotel rooms and time share units) on approximately 5,000 acres in the Coachella Valley area east of the City of Coachella. The FIA was prepared by Development Planning and Finance Group (DPFG), Inc. The FIA evaluates the potential fiscal impacts from development of the Project on the operating budgets of four Riverside County funds: the General Fund, Transportation Fund, Library and the Fire Fund.

Fiscal impacts to school, recreation and park, water, sewer districts are not analyzed in the FIA. There are currently no special service districts established on the property.

The FIA does not analyze capital costs or impacts on public facilities needed by the project, which should be treated separately from a fiscal impact study.

The objectives of our review of the FIA are three-fold and validate whether:

- 1. The assumptions made in the FIA are reasonable;
- 2. The modeling is according to industry standards and follows Riverside County's 1995 Guide to Preparing Fiscal Impact Reports (Guide) adjusted to current budget conditions; and
- 3. The conclusions can be supported by the calculations and documentation in the FIA.

Michael Baker's review included a multi-step approach that included the following:

• Review of the County of Riverside FY 2016–17 adopted and recommended budgets (the FIA was based on the 2015–16 budget);

Paradise Valley (SP 00339) Fiscal Impact Analysis-Review July 12, 2017 Page **2** of **9** 

- Spot check of data references and assumptions through outside research;
- Evaluate whether alternative methodologies used in the FIA are comparable to methodologies described in the Guide; and
- Preparation of the review memo on our findings.

This memorandum is organized into three sections. The first provides context to the FIA, the second describes the findings of the study and the third section provides our review conclusions.

### **Context to the FIA**

The FIA relies on the County's 2015–16 budget to derive cost and revenue multipliers for County General Fund activities where use of the multiplier method is in accordance with the Guide. The Guide permits the use of countywide multipliers for several General Fund cost areas, including the following:

- General Government
- Public Protection (except for Sheriff Patrol and direct Animal Control services)
- Health and Sanitation
- Public Assistance
- Education, Recreation & Culture
- Debt Service

For specific plans and land use studies, the Guide states that project-specific case-study methods should be used for Animal Control and Sheriff Patrol costs.

Fire Protection, Road Maintenance and Library are independent funds. For Fire Protection, the Guide generally allows costs to be calculated by the multiplier method. However, for large projects which will require expansion of service, including new fire stations, a case-study method is necessary. The FIA also provides a case-study analyses for Library and Road Maintenance.<sup>1</sup>

It should be noted that the fiscal impacts of the Project as identified in the FIA are based on data available at the time of the preparation of the FIA and do not represent absolute financial projections at build-out of the Project. It is particularly important for the reader to keep this caveat in mind when considering inputs and factors used to estimate the ongoing fiscal impacts of the Project on the County General Fund and the other funds. The FIA provides the fiscal impacts for a 13-year Project absorption/phasing schedule and a 31-year cash-flow analysis.

<sup>&</sup>lt;sup>1</sup> In addition to these funds analyzed in the FIA the County Flood Control and Water Conservation District also operates independently of the General Fund. However, the District does not operate in the eastern area of the County (east of Palm Springs).

Paradise Valley (SP 00339) Fiscal Impact Analysis-Review July 12, 2017 Page **3** of **9** 

In accordance with the methodology prescribed in the Guide, except for property taxes, property transfer tax, sales tax, Transient Occupancy Tax and Property Tax in-lieu of Motor Vehicle Fee (MVLF), which are based on project-specific case-study analyses, all recurring revenues are calculated using per capita multipliers based on the 2015–16 adopted budget totals (we have recalculated the revenue multipliers using 2016-17 adopted budget and current population and employment numbers and have found them to be generally consistent with those in the FIA).

### **Findings**

The FIA in general conforms to the Guide with modifications as noted in the following areas:

### **General Fund Costs**

The FIA calculates the net General Fund contribution or "Net Cost to County" (NCC) for each departmental expense line item. The NCC is calculated by subtracting nondiscretionary revenue (including such revenues as intergovernmental funds for specific programs and direct cost recovery user fees) from the budgeted expenditures as directed in the Guide. The FIA then assigns a marginal increase factor that accounts for fixed overhead versus variable costs of departments that are affected by population growth. This is an industry standard approach to estimating the cost impacts related to growth. The Guide does not specify what marginal factor to use, which may range from 0% to 100%, depending on the department's function. The lower percentage indicates lower overall impact to the department's operations as a result of growth, whereas a high percentage means the department will likely incur increased cost-usually due to increased staffing in response to growth. The FIA percentages are either 25%, 50% or 100%. For the General Fund as a whole, the overall factored NCC is 59% of the total financing requirements (total budget minus nondiscretionary revenues). In other words, the FIA estimates that approximately 59% of the General Fund budget increases over time are due to population growth. Our analysis of the last seven years of the County's budget data comparing NCC to the County's population growth supports an overall NCC marginal increase factor of between 50% and 60%.

### **General Fund Revenues**

### Per Capita Revenues

The revenue sources determined by per capita multipliers, based on the 2015/16 adopted budget and 2016 population, include franchise fees, licenses and permits, fines and penalties, Federal inlieu taxes, and court fees. These are all revenues that go to the General Fund to offset discretionary programs and expenditures. The aggregate per capita revenue from these sources Paradise Valley (SP 00339) Fiscal Impact Analysis-Review July 12, 2017 Page **4** of **9** 

is \$19.84 (totaling \$355,711 for the Project). We arrived at essentially the same revenue factor using the 2016/17 budget and the 2017 California Department of Finance population estimate (unincorporated and Countywide) and the current Employment Development Department information for employment. We concur with the methodology and calculations for multiplierderived revenues.

### Case-Study Revenues

The largest Project revenues will be derived from the secured and unsecured ad valorem property tax (\$4.9 million), the MVLF (\$3.1 million), Transient Occupancy Tax (\$1.35 million), and Sales and Use Taxes (\$1.1 million). These major revenues were estimated by the case-study method as directed in the Guide. Property taxes and the MVLF revenues are driven by assessed valuations, which are based on assumptions of expected home prices and non-residential construction costs in the area. The range of sale prices assumed for the Project range from \$272,000 for a stacked flat condominium unit to \$632,000 for a single family unit on the largest (85' x 115') lot. The lower end prices are comparable to the median price for condominiums in the City of Coachella (\$240,000, for units in buildings with 5 or more units). The median prices for single family homes in Coachella are somewhat lower than the mid-range home in the Project: \$370,000 for a detached home in Coachella vs. \$450,000 in the Project (home on a 50' x 90' lot in Village 5). Prices in the next closest cities, La Quinta and Indio, are similar to Coachella's.

The construction cost valuations for the non-residential buildings are reasonable for the type of construction proposed by the Project developers.

The Transient Occupancy Tax (TOT) revenues are derived from the Project's business and resort hotel rooms. The Riverside County TOT is 10% of hotel rental revenue. The FIA assumes a business room rate of \$87 per night and a resort rate of \$178 per night. Occupancies are assumed at 56% and 60%, respectively, which is consistent with the Guide. The assumed room rates appear comparable to higher-end lodging found in Coachella, La Quinta and Indio.

Sales and Use taxes are derived only from the retail floor area, projected at approximately 442,000 square feet at build-out. The FIA assumes \$200 of taxable sales per square foot, which is a typical value found in fiscal impact studies. Sales and use tax revenues are also derived from the business and resort hotels' food, beverage and other sales, in addition to the tax on room rate revenues. To avoid double-counting taxable sales, the FIA does not consider household taxable expenditures. This approach also avoids needing to adjust for potential sales leakage to off-site retail and gives some assurance that the taxable sales are "new" and not taking sales away from existing retail in the County.

Paradise Valley (SP 00339) Fiscal Impact Analysis-Review July 12, 2017 Page **5** of **9** 

The other case-study revenue is the documentary transfer tax, which was determined by assuming a 14% annual turnover rate applied to residential property resulting in \$500,000 in transfer taxes and 10% applied to non-residential, which provides another \$33,900 in revenues. The Guide specifies a 10% turnover rate for residential, which if applied to the Project, would reduce the residential transfer tax by about \$150,000.

## Sheriff Patrol Cost: Case-Study Method

The FIA estimates Sheriff Protection cost for the Project based on the Board of Supervisor's Sheriff Deputy staffing policy of 1.2 officers per 1,000 residents and a calculated cost per deputy. The Guide specifies that the case-study method is to be used for Sheriff Patrol costs, while other "Police Protection" may be calculated using the multiplier method. The FIA used a modified casestudy approach by incorporating the Police Protection costs in the cost per deputy. This procedure attempts to capture the fully-burdened cost for each deputy (salaries and benefits, supplies and expenses and administrative overhead). The Police Protection costs included in the FIA's analysis are: Administration, Support, Patrol, Court Services, CAC Security and Training Center. The net General Fund contribution total for these functions is added to the charge for Sheriff Patrol services contracted by the cities to calculate the fully-burdened cost to the County per deputy of approximately \$128,000 per year. While this amount might be a reasonable estimate of net County cost per deputy, it may not accurately capture the overall Police Protection costs that may otherwise be derived using the multiplier method for all Police Department costs other than Patrol. The NCC for Police Protection less Patrol is \$37.4 million (2016-17 Adopted Budget). Assuming a 59% marginal increase factor, then dividing by the unincorporated residential population (373,755) results in a per capita multiplier of approximately \$59. The Project's impact on Police Protection would then be: \$59 times the Project's residential population of 15,724, or \$928,000. The Sheriff Patrol expenditures for 2016-17 is \$228.1 million, which is divided by 1,792, the number of filled Sheriff Patrol positions, resulting in an estimated annual cost of \$127,300 to provide one deputy. At the rate of 1.2 deputies per 1,000 residents the Project will require 19 deputies for a total annual cost of \$2.42 million. The cost of additional patrol officers is combined with the Project's cost for Police Protection (net of Patrol) for a total Project cost of \$3.35 million compared to the \$2.4 million calculated in the FIA using the modified case-study method.

## Animal Control Case Study

The Guide also requires a case study approach for Animal Control. A similar analysis as above for Sheriff Patrol may be done for Animal Control. Animal Services is included in Public Protection-Other Protection. If calculated separately, the portion of the Other Protection budget allocated

Paradise Valley (SP 00339) Fiscal Impact Analysis-Review July 12, 2017 Page 6 of 9

to Animal Services would be about \$3.00 per capita (NCC of Animal Services divided by total county population). The County Department of Animal Services provides animal control field and shelter services to 11 cities with a combined population of 829,126 at a cost of \$9,438,523, for a cost per capita of \$11.38. The \$3.00 per capita in the Public Protection cost per capita should be replaced with \$11.38, which we believe is more indicative of the actual cost to provide field and shelter services for new development. The additional \$8.38 in cost per capita results in \$131,800 more in total Animal Control costs for the Project.

## **Other County Funds**

The FIA addresses the following non General Funds, each the subject of a case-study analysis:

- County Transportation fund
- Fire Fund (County Structural Fire Protection)
- Library Fund

Each fund has its own revenue sources, either a percentage of the property tax or, in the case of transportation, the Highway User/Gas Tax subventions from the state and the Measure A sales tax. Although the funds operate-independently of the General Fund, funds may be transferred from time to time from the General Fund to cover deficits in the fund balances. As required in the Guide, the impacts to each fund is analyzed in more detail as follows:

## **Transportation Fund**

Transportation Fund revenues may rely on a per capita multiplier for the countywide Highway Users/Gas Tax. The FIA calculates a per capita revenue of \$12.09, (based on residential population plus 50% of employment). Measure A revenue is not considered since it is used for non-recurring capital projects. The revenue sources are then compared to the estimated actual cost of maintaining public streets in the Project, plus the Project's share to maintain arterial roadway improvements needed by the Project. A cost of \$6,885 per lane-mile was provided by TLMA staff. The Project will have an estimated 104.84 lane-miles for a total financing requirement of \$721,800. Of the total Highway Users/Gas Tax, the Guide states that only 77% is allocated to local roads and 23% to arterials. Therefore of the \$12.09 only \$9.31 per capita would be available for the Project's backbone and in-tract roadways. The Project will generate \$168,300 annually for local roads, resulting in a deficit of \$553,500. The FIA, using 100% of the Highway Users/Gas Tax, calculated a deficit of \$503,275. This deficit shows up as an annual General Fund transfer under Financing Sources in the Fire and Transportation Phasing Analysis (FIA Exhibit B).

Paradise Valley (SP 00339) Fiscal Impact Analysis-Review July 12, 2017 Page **7** of **9** 

## Structural Fire Protection Fund

The FIA calculates \$2.04 million in property tax revenues to the Fire Fund derived from the Project's assessed valuation. The cost of fire protection for a project of this size warrants a casestudy analysis. The Specific Plan document provides a general description of the fire protection infrastructure and staffing required in phases through build-out. The following schedule of fire services is presented in Section 5 of SP-00339<sup>2</sup>:

- A temporary fire station staffed with one 3-person fire engine, concurrent with the delivery of combustibles;
- A permanent station with one 3-person fire engine concurrent with the 1,000<sup>th</sup> residential building permit;
- A second squad, fire engine and/or fire sub-station may be required prior to build-out;
- A third squad, fire engine and/or fire sub-station may be required at build-out.

For purposes of calculating the cost of providing fire-fighting staff, the FIA assumes two new fire stations with 7-person staffing each at a cost of \$3.5 million per station. The FIA gives a total cost of only \$3.5 million, therefore it's not clear if the \$3.5 million cost is intended for one station or two. Also, it is not clear whether this cost includes the maintenance of the stations and the apparatus in addition to the staffing costs. An engine company normally comprises 3 to 4 fire-fighters. A fully-staffed squad would include three shifts requiring up to 12 fire-fighters. A fully-burdened annual cost for each fire-fighter may be estimated at \$170,000, resulting in a staffing cost of up to \$4.08 million for two stations.<sup>3</sup> DPFG should verify the FIA's assumptions, by contacting Riverside County Fire Department to establish: 1) the fire station requirements for the Project and 2) an annual cost to the County to staff and maintain the station(s) and apparatus.

The FIA indicates that the Fire Fund deficit (\$1.46 million based on FIA cost assumptions) will be covered by a combination of proceeds from a proposed new County Service Area (CSA) and by transfers from the General Fund. The FIA assumes a CSA tax of \$100 per residential unit, for a total CSA tax revenue of \$849,000. The balance of the deficit--\$609,000--would be transfers from the General Fund.

<sup>&</sup>lt;sup>2</sup> The Specific Plan states that the Riverside County Fire Department will be consulted for the actual infrastructure requirements as various Project milestones. The cost of fire engines and construction of stations is not included in fiscal impact studies.

<sup>&</sup>lt;sup>3</sup> Since the County contracts with the California Department of Forestry and Fire Protection (CALFIRE) for staffing of stations, the actual cost of staffing and other contractual services may not be estimated directly using County budget data.

Paradise Valley (SP 00339) Fiscal Impact Analysis-Review July 12, 2017 Page **8** of **9** 

## Library Fund

The primary Library Fund revenue source is derived from property taxes. The basic tax rate allocated to the Library Fund is used to determine Project revenues. Annual Project library property tax revenues are estimated at \$499,460; rents and interest on the fund balance bring the total revenue to \$502,000.

,

The cost for Library Services is estimated by the multiplier method. The Library Fund's NCC of approximately \$24 million is divided by the total County service population, for a cost per capita of about \$8.68. The library cost for the Project would then be \$157,000 (\$8.68 x 18,080). Therefore, the Project is shown to generate a surplus at build-out for the County's Library Fund of approximately \$345,000.

## Special District Impacts

The Guide requires an analysis of impacts on any affected special service districts including CSAs, Community Service Districts (CSDs) and Community Facilities Districts (CFDs). There are none of these special districts currently established on the property. However, the Specific Plan and the FIA propose the formation of one or more such districts to provide funding for identified deficits in the Transportation Fund, and the Fire Fund and other Project maintenance costs. Formation of a Lighting and Landscape Maintenance District (LLMD) may also be considered for streetlights and median and parkway landscaping. The FIA does not discuss park operation and maintenance costs. The property is within the Coachella Valley Recreation and Park District, which provides regional park facilities. Maintenance of the Project's public parks would not necessarily be funded from the CVRPD budget, therefore a CFD would need to be formed for that purpose.

## Conclusion

With exception for specific areas noted above, the FIA is conducted within general industry standards and in accordance with the County's Guide. The cost and revenue factors used in the FIA are based on data from the County's FY 2015–16 adopted budget. We have verified that the cost and revenues are essentially the same as those calculated using the 2016-17 adopted budget. The following is a summary of findings of impacts to the County funds:

• The Project surplus of \$6.1 million at build-out stated in the FIA would be reduced if casestudy analyses were conducted for Sheriff Patrol and Animal Control. This review identifies an additional cost of about \$1,810,000 for these two functions. Paradise Valley (SP 00339) Fiscal Impact Analysis-Review July 12, 2017 Page **9** of **9** 

- The Project may generate a much greater shortfall in the County Structural Fire Protection Fund than the \$1.46 million estimated (before CSA revenues). DPFG should verify its assumptions of Fire Protection costs.
- The sales prices of homes assumed in the FIA tend to be higher than prices for new homes in the City of Coachella. The Project's property tax revenues should be reviewed after the first phase has been sold, and/or sensitivity testing on assessed valuations and their resulting fiscal impact to fund public services.
- The phasing plan shows the Project generating a small deficit for each of the first four years. Beginning in the fifth year the Project generates a surplus that grows until the 13<sup>th</sup> year, which is the final year of Project absorption. The net surplus diminishes every year after that (the calculations are extended to the 31<sup>st</sup> year after absorption begins). The diminishing surplus is due to the 0.41% net reduction in assessed valuations, which is the procedure specified in the Guide to account for inflationary cost increases. The 2% Prop. 13 increase is subtracted from the historic average inflation of 2.41% (Consumer Price Index LA/Anaheim/Riverside-1990 to present). The resulting annual decreases in assessed valuation results in reduced property tax, MVLF and the documentary transfer tax. Revenue reduction is used rather than applying cost increases to departmental operations. Overall, this is a conservative approach since it does not incorporate increases in assessed valuation that occur from turnover, nor increases in sales & use taxes due to inflationary increases considered in the model.
- Maintenance of local parks and open space in the County is funded through County Service Areas and is not a General Plan activity. The FIA should provide a cost analysis for the Project's proposed local public parks including revenue requirements from CSA assessments. The Guide states impacts to special districts are to be analyzed.

## Memorandum

|          |                                                |  |

## **Introduction and Conclusions**

This revision reflects final review comments received from Michael Baker International.

The February 2017 FIA was prepared in accordance with the general methodologies outlined in the County FIA Guidelines to Preparing Fiscal Impact Reports ("County FIA Guidelines"), dated January 1995. The February 2017 FIA examines the financial impact the Project will have on the County's general fund ("General Fund"), fire fund ("Fire Fund"), library fund ("Library Fund"), and transportation fund ("Transportation Fund"). The Project will generate additional income for the General Fund primarily through increased property taxes, sales taxes, and transient occupancy taxes, while increasing the need for County services such as police, fire, and health and sanitation.

Based on the assumptions and calculations detailed in the attached February 2017 FIA, the Project is expected to yield a new net annual surplus at buildout of approximately \$6.6 million (see Exhibit A, Table 1).

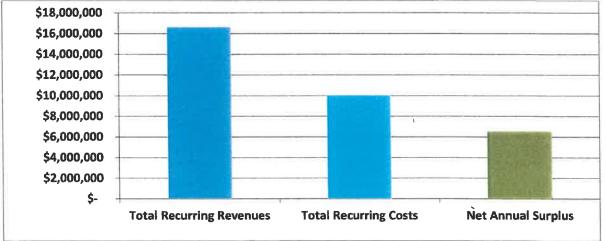

Table 1: Net Annual Surplus at Buildout

The Draft FIA is based on the following key assumptions:

- Per the County FIA Guidelines, the methodology used to determine the allocable revenue and cost impacts to County Funds as a result of the Project's development is a combination of case study methods and multiplier methods
- County Budget: Riverside County 2015-16 Recommended Budget
- Fire Phasing Analysis is based on draft fire conditions
- General Fund revenues are assumed to be transferred at various times to the Fire Fund and Transportation Fund

The FIA is organized as follows:

- Exhibit A Fiscal Impact Analysis at buildout
- Exhibit B Fire and Transportation Funds Phasing Analysis
- Exhibit C Phasing Analysis

## Exhibit A - Fiscal Impact Analysis Table 1 - Riverside County Fiscal Impact Analysis Summary Paradise Valley February 15, 2017

## Footnotes:

Source: FY 2014-15 Property Tax Share per Riverside County Auditor-Controller's Office, Property Tax Division. (a) In additional to other ad valorem charges imposed by various local agencies, land owners in California are required to pay annual property taxes of 1% on the assessed value of their property pursuant to Proposition 13. Each County in California is divided into tax rate areas ("TRA"). After the basic 1% property tax is collected by the county, the tax is allocated to various local agencies based on each agency's share of the basic tax within the property's applicable TRA. This exhibit shows the share of the basic tax applicable to both of the TRAs applicable to the Project.

(b) Shares of the basic tax that are received by the County for each tax rate area are highlighted in bold print.(c) For purposes of the analysis, the weighted average tax rates were calculated based on the acreage of the TRAs within the Project.

(d) Acres based on total acreage of parcels that include a portion of the development planned for Phase I. Parcel acreage was not adjusted to remove parcel area that overlaps with undeveloped areas and subsequent phases of development.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Image: biology of the point of the                          | Q.                                                                |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Per The Nateboor Date Group, Analysis of Onsite Employment Potentials, dated April 19<br>Employment calculations assume that retail, light industrial, and office space will have a<br>activities not tied to permanent commercial/institutional locations. Calculations per The h<br>Per DPFE database of fiscal impact studies | Footnotes:                                                                                                                      |               |    |                          |

Footnotes:

(a) This analysis assumes an annual assessed value deflation factor of 0.41% (Calculated by subtracting the 2% limit on annual increases in assessed value imposed by Proposition 13 from the historical average U.S. inflation rate from 1993 through 2014 of 2.41%, per InflationData.com).

(b) Project is assumed to be developed after termination of the triple flip on January 1, 2016.

- (c) Assumes residential property is sold approximately every 7 years and non-residential property is sold approximately every 10 years.
- (d) The County may levy a transfer tax at the rate of \$0.55 for each \$500 of assessed value. A City within the County that levies this tax can levy a transfer tax at a rate of \$0.55 per \$1,000. If both the County and City levy the transfer tax, a credit shall be allowed against the amount imposed by the County in the amount of tax that is imposed by the City per California Revenue and Taxation Code 11911.

Footnotes: (a) Not used.

(c) Analysis assumes that 0% of light industrial and office space and 100% of retail space will provide products and services that generate sales tax revenue.

(d) Per County of Riverside Guide to Preparing Fiscal Impact Reports dated January 1995.

(e) Per U. S. Bureau of Labor Statistics Consumer Expenditure Survey, 2008 which indicates that retail taxable purchases

represent approximately 32% of total household income for the average U.S. household. (f) To be conservative and avoid potential double-counting of sales tax revenue, this analysis assumes that there will be no additional sales tax

generated by project residents for the County of Riverside through taxable purchases made outside of the project area, but within Riverside County.

 (g) Project is assumed to be developed after termination of the triple flip on January 1, 2016.
 (h) Investment earnings, as specified in the Guide to Preparing Fiscal Impact Reports, are estimated using the historic average interest rate of the 90-day Treasury Bill. The analysis assumes a rate of 1.13%, the 10-year historic average interest rate from 2006 through 2015 of the 90-day Treasury Bill. In 1994, the Guide to Preparing Fiscal Impact Reports calculated a historic average interest rate of 6.98%.

(i) Per the Division of Accounting and Reporting at the California State Controller's Office.

(j) Per page 354 from the County of Riverside FY 2015-16 Recommended Budget.

(i) For the County of Riverside Assessor County Clerk Recorder, Assessed Value Report FY 2015-16 (http://www.asrclkrec.com/QuickLinks/AnnualReports.aspx).
 (ii) Revenue per available room for limited service hotels in the Mountain and Pacific region per the 2014 USA Edition of Trends in the Hotel Industry

prepared by PKF Hospitality Research. Amounts have been adjusted based on information from the Smith Travel Research ("STR") report.

(m) Per the County of Riverside Tax Collector, Transient Occupancy Tax form.

(n) Average occupancy rate and average room rate per Smith Travel Research ("STR") report.

(c) Revenue per available room for resort hotels in the Mountain and Pacific region per the 2014 USA Edition of Trends in the Hotel Industry

(p) Per STR website, limited-service hotels have rooms-only operations, (i.e. without food and beverage service) or offer a bedroom and bathroom for the night, but very few other services and amenities. These hotels are often in the budget or economy group and do not report food and beverage revenue.

(a) Not used.

(b) Source: DPFG estimate based on peer review comments on other Riverside County FIAs.

(c) Analysis assumes that 0% of light industrial and office space and 100% of retail space will provide products and services that generate sales tax revenue. (d) Per County of Riverside Guide to Preparing Fiscal Impact Reports dated January 1995.

(e) Per U. S. Bureau of Labor Statistics Consumer Expenditure Survey, 2008 which indicates that retail taxable purchases

represent approximately 32% of total household income for the average U.S. household. (f) To be conservative and avoid potential double-counting of sales tax revenue, this analysis assumes that there will be no additional sales tax

generated by project residents for the County of Riverside through taxable purchases made outside of the project area, but within Riverside County.

(g) Project is assumed to be developed after termination of the triple flip on January 1, 2016.

(h) Investment earnings, as specified in the Guide to Preparing Fiscal Impact Reports, are estimated using the historic average interest rate of the 90-day Treasury Bill. The analysis assumes a rate of 1.13%, the 10-year historic average interest rate from 2006 through 2015 of the 90-day Treasury Bill. In 1994, the Guide to Preparing Fiscal Impact Reports calculated a historic average interest rate of 6.98%.

(i) Per the Division of Accounting and Reporting at the California State Controller's Office.

(j) Per page 354 from the County of Riverside FY 2015-16 Recommended Budget.

(k) Per the County of Riverside Assessor County Clerk Recorder, Assessed Value Report FY 2015-16 (http://www.asrclkrec.com/QuickLinks/AnnualReports.aspx).

- (I) Revenue per available room for limited service hotels in the Mountain and Pacific region per the 2014 USA Edition of Trends in the Hotel Industry
- prepared by PKF Hospitality Research. Amounts have been adjusted based on information from the Smith Travel Research ("STR") report. (m) Per the County of Riverside Tax Collector, Transient Occupancy Tax form.

(n) Average occupancy rate and average room rate per Smith Travel Research ("STR") report.

(o) Revenue per available room for resort hotels in the Mountain and Pacific region per the 2014 USA Edition of Trends in the Hotel Industry prepared by PKF Hospitality Research. Amounts have been adjusted based on information from the Smith Travel Research ("STR") report.

Per STR website, limited-service hotels have rooms-only operations, (i.e. without food and beverage service) or offer a bedroom and bathroom (p)

- for the night, but very few other services and amenities. These hotels are often in the budget or economy group and do not report food and beverage revenue.
- (q) Per STR website, full-service hotels are generally mid-price, upscale or luxury hotels with a restaurant, lounge facilities and meeting space. and offer minimum service levels, often including bell service and room service. These hotels report food and beverage revenue.
